DEWORMING INFO & DOSAGE CHART

WHY SHOULD YOU BE DEWORMING?

1. HEALTH OF THE MOTHER: PARASITES CAN HAVE A NEGATIVE IMPACT ON THE HEALTH OF THE PREGNANT DOG. THEY CAN LEAD TO ANEMIA, MALNUTRITION, AND A WEAKENED IMMUNE SYSTEM, WHICH CAN AFFECT THE DOG'S ABILITY TO CARRY A HEALTHY LITTER.

2. HEALTH OF THE PUPPIES: IF A PREGNANT DOG HAS INTESTINAL PARASITES, THE PUPPIES CAN BE INFECTED BEFORE THEYARE EVEN BORN, EITHER THROUGH THE PLACENTA OR THROUGH THE MOTHER'S MILK. THIS CAN LEAD TO HEALTH PROBLEMS INTHE PUPPIES, SUCH AS POOR GROWTH AND DEVELOPMENT, AND POTENTIALLY EVEN LIFE-THREATENING CONDITIONS.

3. REDUCED RISK OF TRANSMISSION: DEWORMING THE PREGNANT DOG HELPS REDUCE THE RISK OF TRANSMISSION OF PARASITES TO THE PUPPIES AND TO HUMANS WHO MAY COME INTO CONTACT WITH THE PUPPIES.

4. IMPROVED MILK PRODUCTION: HEALTHY, PARASITE-FREE MOTHERS ARE MORE LIKELY TO PRODUCE SUFFICIENT MILK FOR THEIR PUPPIES, WHICH IS CRUCIAL FOR THEIR GROWTH AND DEVELOPMENT.

PYRANTEL PAMOATE

LBS	1	2	3	4	5	6	7	8	9	10
ML	.2	.2	.3	.4	.5	.6	.7	.8	.9	1

ANYTHING UNDER 1 LB STILL ADMINISTER .2 ML. THE EASIEST WAY TO DO THIS IS WITH A DISPOSABLE 1ML SYRINGE. START DEWORMING PUPPIES AT 2 WEEKS AND EVERY 2 WEEKS AFTER UNTIL THEIR FIRST VET VISIT WHICH SHOULD BE AT WEEK 6. FOR PREGNANT FEMALES ADMINISTER AT DAY 45. YOU WILL ADMINISTER 1 ML FOR EVERY 10 LBS. **EXAMPLE: 30 LBS WOULD BE 3 ML**

FENBENDAZOLE

LBS	1	2	3	4	5	6	7	8	9	10
ML	.2	.3	.5	.9	1.2	1.4	1.6	1.8	2.1	2.3

IF DESIRED CAN SWITCH TO THIS AT 6 TO 8 WEEKS. BY WEEK 6 HOWEVER THEY SHOULD BE VISITING A VET THAT CAN ADMINISTER DEWORMER ALONG WITH CHECKUP.

Below is what we currently use to deworm our pregnant females and our puppies. We deworm at week 2 and 4. At week 6 puppies will get dewormed at the vet.
