HOW THE FOREX MARKET WORKS

The Forex market moves based on:

Supply and demand

Economic news

Technical patterns

The key truth is this:

The market is not random — it follows patterns that can be studied and used.

BASIC FOREX CONCEPTS

Pips: The smallest movement in price.

Lot Size: The volume of your trade.

Leverage: Allows you to control larger trades with smaller capital.

Warning: Leverage can increase profits but also increases risk.

MARKET STRUCTURE

Understanding market structure is essential:

Uptrend: Higher highs and higher lows

Downtrend: Lower lows and lower highs

Consolidation: Sideways movement

Always follow the trend. Trend is your best friend.

INTRODUCTION TO SIGNAL TRADING

Forex signals are trade ideas provided by experienced traders. These signals include:

Take profit

Signals help you trade without guessing.

WHY SIGNALS ARE THE BEST STRATEGY

Signals are powerful because they:

Save time

RISK MANAGEMENT

This is the most important rule in trading.

Never risk more than 1–2% of your account on a single trade.

Example:

If your account is \$100, risk only \$1–\$2 per trade.

This protects your account from blowing.

TRADING PSYCHOLOGY

Your mindset determines your success.

Avoid:

Fear

Greed

Impatience

Success in Forex is 80% psychology and 20% strategy.
