

SORA FLOORING

Care and maintenance

Our project collection floors are easy to maintain. On a daily basis all that is required is to vacuum the floor and from time to time wipe the floor with a well-wrung floor mop. Use a Ph.-neutral cleaner suitable for wood flooring. Any water left on the floor should dry within one minute.

The specification of good non directional mats, both inside and outside any external door, will prevent the ingress of dirt and grit that will cause unnecessary wear on your floor.

Put felt pads on your furniture to minimise the risk of scratches and unnecessary damage to your floor.

If you get a mark on the floor, you can try and remove it using a mild detergent (without ammonia). If that is not enough, you can try to use methylated spirits and water 50/50. Take care when using strong stain removal materials, since over application of these materials coupled to excessive rubbing could affect the lacquer.
