

Anespa

Why Shower Water Quality Matters

Many people focus on the quality of the water they drink but overlook the water they bathe in every day. Chlorine, heavy metals, and other impurities in tap water can dry out skin, weaken hair, and reduce natural moisture levels. Over time, this can lead to irritation and dullness. The Anespa transforms ordinary shower water into a gentle, mineral-rich flow that nourishes the skin and refreshes the body.

What is the Anespa?

The Anespa is a home mineral ion spa system designed to recreate the effects of natural hot springs. Using a dual-cartridge filtration process and natural mineral stones from Japan, the system produces clean, revitalizing water that helps soften and protect the skin while offering a deeply relaxing shower experience.

How It Works

The Anespa uses a combination of mechanical and mineral filtration. First, a ceramic pre-filter removes chlorine and impurities from the water. Then, the water flows through a mineral cartridge containing natural stones such as Tufa and MIC stone from Futamata Onsen in Japan. These minerals infuse the water with ions, creating a soothing and spa-like experience right in your home.

Key Features

- Dual filtration system for chlorine and impurity removal.
- Mineral cartridge with Japanese natural stones (Tufa & MIC stone).
- Produces micro-clustered, mineral-enriched water.
- Long-lasting cartridges and easy installation.
- Compact, durable, and energy-efficient design.

Benefits of Mineral-Rich Water

- Helps maintain skin's natural moisture and softness.
- Supports healthier, shinier hair by reducing chlorine exposure.
- Promotes relaxation through negative ion effects.
- Leaves the skin feeling smooth, refreshed, and nourished.
- Provides a luxurious, spa-like experience every day.

Tap Water vs. Kangen Water

Tap Water: Often contains chlorine, rust, and chemical residues that can dry and irritate skin and hair.

Kangen Water: Filtered and mineral-infused, delivering soft, refreshing, and rejuvenating water that supports skin and hair health.

Maintenance Overview

The Anespa requires minimal upkeep. The pre-filter and mineral cartridge are designed for long-term use but should be replaced periodically to maintain the best water quality. The system's compact design allows for easy cleaning and replacement, ensuring consistent performance.

The Value of the Anespa

The Anespa brings the benefits of Japanese hot springs directly into your home. By transforming ordinary tap water into mineral-rich, spa-quality water, it enhances relaxation, promotes healthy skin and hair, and adds a touch of luxury to your daily routine. The Anespa is not just a shower system—it's a wellness experience.
