PSL Cowork Network Operational Model Term Sheet

Effective Date: February 2026

Issued by: PSL Cowork Network (under PSL Luxury Lifestyle Brand)

Purpose: This Term Sheet serves as the internal operational terms and conditions document for all enrolled Professionals (trained via the PSL Luxury Trading Masterclass) and Stakeholders funding the network. It outlines the structure, roles, responsibilities, qualification process, work execution, payment mechanisms, account management, and detachment principles. This document is provided exclusively to subscribed Stakeholders and Professionals who have enrolled in and/or completed at least the first

masterclass series. It forms part of the subscriber's contractual understanding with PSL Cowork Network and is not for public distribution or website publication.

1. Overview of PSL Cowork Network

PSL Cowork Network operates as a hybrid and remote professional work ecosystem in 2026, centered on executing trade setups using the Power40 Scientific Trading Method. This method is taught through the PSL Luxury Trading Masterclass program, consisting of 36 masterclass series.

The network trains and deploys Professionals to perform simple, instruction-based trade execution tasks on assigned trading accounts. Weekly, up to 720 new Professionals are trained across 36 hubs (approximately 20 per hub).

This model eliminates traditional freelance competition, client acquisition, bidding, sales efforts, and stress associated with other remote or freelance platforms. Professionals receive guaranteed work and hourly pay without needing to source gigs, compete globally, or handle sales pipelines.

2. Qualification for Professionals

- Enrollment begins with the first masterclass series (attend in-person or virtually).

- After completion, Professionals must pass an aptitude and post-lesson test immediately following the masterclass.

- The test requires an average score of 36 out of 100 points.

- Test structure: Input the first 10 trade setups within a 100-minute timeframe, following assigned parameters.

- Scoring per task:

  - Correct input in less than 5 minutes: 10 points.

  - More than 5 minutes: 6 points.

- More than 10 minutes: 2 points.

- Participants self-record timestamps using a stopwatch (start/end per task) and submit via the time column.

- Wrong inputs are verifiable via screenshot shares of completed mock trades and pending order history.

- All parameters are identical for fairness; speed of execution is tracked.

- The test serves as preparation and speed training for actual job tasks.

- A score of 36/100 qualifies the individual as an official Professional; this status is permanent and not revocable once achieved.

- Scores below 36 allow retakes after the next weekly masterclass series, with ongoing improvement opportunities.

- No interviews, high barriers, or expertise prerequisites beyond following instructions.

3. Professional Role and Responsibilities

- Execute assigned trade entry instructions only (no analysis, decision-making, or emotional involvement).

- Tasks: Log into assigned stakeholder-funded trading account credentials, input pending order setups (stop/limit) with specified entry prices (1–4), lot sizes, and take-profit (TP) exits only—no stop-loss prices.

- Daily assignment: Up to 12 tasks per day (qualifying for 1–2 hours benchmark per day, 5–10 hours per week over 5 banking days).

- Execution process:

  - Receive prompt to perform task.

  - Press button(s) to input trade setup (typically <5 minutes per task).

  - Take screenshot of completed trade for report submission.

- Upload report in the hub's report terminal.

- Log out immediately.

- Accounts are assigned randomly per task (different accounts possible for each of 12–24 daily tasks).

- No affinity or association with stakeholders; detachment ensures emotional independence (Professional acts as instructed, akin to a robot executor).

- No involvement in: finding clients, bidding, competing, marketing, prospect follow-up, sales, product creation, coding/design, store/office setup, inventory, calls/meetings, interviews, physical effort, hostile environments, targets, burnout, or long hours.

- Work is tracked solely by task completion and default screentime.

4. Work Time Tracking and Payment for Professionals

- Pay rate: $5–$9 per hour (starting range).

- Qualified hours: Calculated as (number of completed tasks) × (default 5-minute screentime per task).

- Even if actual execution is 45 seconds to 4:45 minutes, each task counts as 5 minutes for fairness.

- Minimum daily: 1 hour (12 tasks); maximum daily: 2 hours.

- Weekly cap: Up to 10 hours.

- Payments: Issued weekly based on submitted and verified reports—no excuses, delays, or ties to account profit/loss.

- Payouts funded from hub's merchant account (net withdrawals from stakeholder trading accounts).

- Reports (60–120 weekly) confirm tasks; submission ensures qualification.

5. Stakeholder Role and Funding

- Stakeholders fund hubs to enable account creation and task assignments.

- Funding unit: $200 per slot (up to 36 slots per stakeholder per week).

- Upon funding: Hub manager creates/opens a trading account (via specified broker, e.g., CWG Markets or equivalent), performs KYC, and logs details in the hub's ledger.

- Each hub supports 20 stakeholders (ledger: 20 rows per page, 56 pages for weekly series).

- Ledger columns (page 1 initial entry):

  - Serial number (101–120).

  - Full legal name.

  - Email.

  - WhatsApp/phone number.

  - ID type (for KYC).

  - ID number.

  - Payout account number.

  - Bank for payout.

  - Trading account broker.

  - Trading wallet email.

  - Trading wallet password.

  - Trading platform (MT4/MT5).

  - Trading platform account number.

  - Trading platform server name.

  - Trading platform password.

  - Hub slots funded (1–36).

- Ledger balance ($200 × total funded slots).

- Date of hub funding.

- Date of account opening and KYC submission.

- Date of KYC approval.

- Subsequent pages: Update columns 16 (slots 0–36) and 17 (ledger balance); carry forward prior data.

- Funding ties to one hub; duplicated weekly per slots.

- Hub manager: Creates/funds accounts, assigns tasks, reviews balances, funds to $20 daily threshold per task, processes withdrawals.

6. Account Funding, Tasks, and Financial Flow

- Initial: $200 per slot funds the ledger; per-task funding from ledger to trading account ($20 default threshold).

- Larger ledger balances (e.g., $2000) scale lot sizes (0.01 to 0.10) and task frequency.

- Daily: Hub manager funds account to threshold before task; post-task, balance restored via internal transfer if needed.

- Tasks per account: Up to 36 weekly (per $200 ledger increment).

- Withdrawals: Weekly from trading accounts to hub merchant account (net after processing).

- Professionals paid weekly from merchant account.

- Stakeholders paid monthly: 20% of month-end ledger balance (fixed income; trading outcomes do not affect ledger).

7. Key Principles

- Emotional detachment: Random account assignments prevent bias or stress from outcomes.

- Independence: Professionals execute only; no risk exposure or liability.

- Fairness: Default 5-minute count ensures equal earning regardless of speed.

- Security: Hub manager controls credentials; stakeholders retain personal copies.

- Hub independence: Each hub operates via its merchant account for clean payouts.

- Growth: 720 Professionals trained weekly; capped recruitment maintains quality and work availability.

Acknowledgment

By enrolling in the masterclass (Professionals) or funding a hub (Stakeholders), parties acknowledge receipt and understanding of this Operational Model Term Sheet. It governs all operations within PSL Cowork Network. Questions should be directed to the assigned hub manager.

This document is confidential and for internal use only among enrolled parties.

PSL Cowork Network vs. Traditional Freelance Platforms: Why It Outperforms Global Competitors for Flexible Work in 2026

Issued by: PSL Cowork Network (under PSL Luxury Lifestyle Brand)

Effective Date: February 2026

Purpose: This comparison document highlights how PSL Cowork Network addresses the core pain points of major freelance platforms (such as Upwork, Fiverr, Freelancer.com, Toptal, Guru, PeoplePerHour, and others) and delivers a superior model for flexible, remote, or hybrid professional work. It is provided exclusively to enrolled Professionals and Stakeholders as a supplementary reference to the Operational Model Term Sheet. This is an internal document to illustrate PSL's advantages in the 2026 freelance and remote work landscape.

1. The Global Freelance Landscape in 2026

The freelance economy continues to expand rapidly, with an estimated 1.57 billion freelancers worldwide, contributing trillions in earnings and representing a significant portion of the global workforce. Platforms like Upwork, Fiverr, and Freelancer.com dominate, offering access to millions of gigs but at the cost of intense competition, high fees, and instability. Market saturation has led to fierce bidding wars, inconsistent income, and burnout for many professionals. In contrast, PSL Cowork Network eliminates these barriers through a structured, guaranteed-work model focused on simple trade execution tasks.

2. Key Comparison: PSL Cowork Network vs. Traditional Platforms

- **Work Acquisition and Competition**

Traditional Platforms: Freelancers must constantly bid on jobs, submit proposals, compete against hundreds (or thousands) of global competitors, often undercutting rates to win gigs. Winning requires ongoing effort, marketing, and luck; many proposals are ignored, and finding consistent work remains the #1 challenge (cited by ~66% of freelancers).

PSL Cowork Network: No bidding, no proposals, no competition. Once qualified via the first masterclass series (36/100 test score), Professionals receive guaranteed assigned tasks daily (up to 12 per day). Work is always available—no shortages, no chasing clients. This removes the "race to the bottom" and fierce global competition.

- **Client Acquisition and Sales Burden**

Traditional Platforms: Professionals handle finding clients, following up, managing sales pipelines, negotiating, and dealing with low-ball offers or ghosting.

PSL Cowork Network: Zero client acquisition required. Tasks come directly from the hub; no prospecting, no marketing ads, no sales effort. The role focuses solely on executing instructions.

- **Platform Fees and Earnings Retention**

Traditional Platforms: High commissions erode earnings—Fiverr (20% flat), Upwork (up to 15% sliding), Freelancer.com (~10% or minimum), plus withdrawal fees and processing costs. Freelancers lose significant portions annually (e.g., thousands on mid-range earnings).

PSL Cowork Network: No platform fees deducted from Professional pay. Earnings at $5–$9/hour are retained fully, paid weekly based on tracked qualified hours (task count × default 5-minute screentime). No hidden cuts.

- **Income Stability and Guarantees**

Traditional Platforms: Income is unpredictable—dependent on winning bids, client budgets, project availability, and economic factors. Many face dry spells, delayed payments, or non-payment risks (despite protections). Burnout from long hours chasing work is common.

PSL Cowork Network: Guaranteed work allocation (5–10 hours/week cap, 1–2 hours/day benchmark over 5 banking days). Pay is weekly, no excuses, and not tied to trade outcomes (profit/loss irrelevant). Minimum daily qualification ensures steady, low-stress income.

- **Work Nature and Stress Levels**

Traditional Platforms: Often involve complex projects, deadlines, client revisions, emotional labor, targets, interviews, and high-pressure environments. Burnout, long hours, and physical/mental strain are frequent complaints.

PSL Cowork Network: Extremely simple—press button(s) 1–2 times per task (<5 minutes each), input assigned trade setups only. No analysis, no decisions, no emotional involvement (random account assignments ensure detachment). Total screentime ~60 minutes/day max for full qualification; no meetings, no inventory, no physical effort, no hostile settings.

- **Entry Barriers and Qualification**

Traditional Platforms: Competitive approval processes, portfolio requirements, reviews buildup (hard for beginners), niche saturation, and ongoing performance pressure to maintain visibility.

PSL Cowork Network: Low barrier—complete first masterclass, pass fair 36/100 test (designed for accessibility; self-scored transparently via timestamps/screenshots). No interviews, no expertise prerequisites beyond following instructions. Qualification is permanent.

- **Flexibility and Location**

Traditional Platforms: Remote/flexible in theory, but often tied to client time zones, real-time communication, and variable workloads.

PSL Cowork Network: True hybrid/remote freedom—work from home or PSL Hubs. Tasks are prompted and executed asynchronously; minimal screen time; fits around life with low commitment (max 10 hours/week).

- **Scalability and Growth**

Traditional Platforms: Growth depends on ratings, bidding success, and market saturation; many stay stuck in low-pay cycles.

PSL Cowork Network: Weekly training of 720 new Professionals across 36 hubs ensures structured expansion without diluting work availability. Professionals focus on execution, not hustling; hub funding scales opportunities fairly.

3. Why PSL Cowork Network Beats Global Competitors in 2026

In a saturated freelance market plagued by competition, high fees, income instability, and burnout, PSL Cowork Network stands out as the superior choice for flexible work:

- It transforms remote work into a low-stress, guaranteed profession rather than a constant hustle.

- Professionals earn for time and attention (not bids or expertise), with emotional detachment and fairness via default screentime.

- The model prioritizes accessibility (easy qualification) and reliability (no excuses for pay).

- Unlike platforms where work is scarce and fought over, PSL provides abundance through hub-funded tasks and capped recruitment.

This makes PSL the best hybrid/remote opportunity in 2026—eliminating the traditional freelance grind while delivering consistent, luxury-level structure and pay.

Acknowledgment

Enrolled Professionals and Stakeholders are encouraged to reference this comparison alongside the Operational Model Term Sheet. It underscores PSL Cowork Network's commitment to a better, more equitable flexible work ecosystem. Direct questions to your hub manager.
