

EVE Management Consoles:

Native Console:

EVE Native console option requires locally installed software to access your lab nodes. To use the Native console option, you must have Administrator rights on your PC and ensure the TCP port range 1-65000 is not blocked by a firewall or antivirus software. You can use your preferred telnet program like Putty, SecureCRT or others for native Console Telnet. UltraVNC as Native VNC client on Windows.

HTML5 Console:

The EVE PRO HTML5 console provides a clientless solution for managing labs and node sessions. Management is achieved directly through the browser by using the Apache Guacamole HTML5 Engine. It is very convenient for Corporate users with restricted Workstation permissions (Locked Telnet, vnc, rdp). HTML5 Telnet console is integrated and opens telnet sessions in the browser. Right click on the node you wish to capture, choose capture and the interface. Capture Session will open in a new browser window. HTML5 VNC console is integrated and opens VNC sessions in the browser. HTML5 RDP console is integrated and opens RDP sessions in the browser.
