

Fat Loss Program For Men

Bodyweight Edition

A note from the creators

Our goal is to provide you with a program that will help you sculpt the body you want. We believe that this program is not about perfection. It is about showing up for yourself every day.

This program is designed for men who want to aggressively reduce body fat while preserving muscle mass. Strict consistency with training, nutrition, and daily movement is essential for strong results over 6–8 weeks.

This program cuts through the noise and focuses on what actually works – burning fat, building strength, and improving fitness using just your body weight. Whether you don't have access to a gym, feel intimidated by equipment, or struggle with consistency, this is your opportunity to take control and get results anywhere. No complicated setups, no gimmicks. Just a clear, structured path to becoming leaner, fitter, and stronger using simple, effective bodyweight training you can stick to long-term.

This is not just another plan that you will end up quitting - but a commitment you will keep.

Show up - even when you don't feel like it. You are building discipline - not chasing motivation.

Your transformation starts now,

N & E

How to use this program:

1. Follow the plan consistently (this is everything). Results come from consistency, not perfection. Stick to the training, nutrition, and step targets daily for at least 6–8 weeks before judging progress.
2. Hit your calorie and protein targets first. If you only get one thing right, make it this.
3. Train with effort, not just attendance. Don't just "go through the motions." Push your sets close to failure while maintaining good form.
4. Use the meal plan as a flexible guide. You don't have to eat the exact same foods every day. Swap meals within the structure as long as you stay within your calorie and macro targets.
5. Don't skip steps or cardio. Fat loss isn't just about gym sessions.
6. Plan your week in advance. Decide ahead of time. This removes decision fatigue and keeps you on track.
Decide:
 - When you'll train
 - What you'll eat
 - When you'll do cardio
7. Track your progress weekly (not daily). Weigh yourself 2–3 times per week and take progress photos. Look for trends over time, not daily fluctuations.
8. Expect challenges — and stick to the program through them. You will have days where motivation drops. That's normal. Discipline, not motivation, is what gets results.
9. Recovery matters. Sleep 6 – 8 hours per night and take your rest days seriously. Fat loss and muscle retention both depend on proper recovery.
10. Adjust only if needed. If after 2–3 weeks, progress is not as desirable:
 - Slightly reduce calories OR
 - Increase daily activity (steps/cardio)
 - Don't make random changes too early.
 - Trust the process
