

Muscle Growth Program For Men

A note from the creators

Our goal is to provide you with a program that will help you sculpt the body you want. We believe that this program is not about perfection. It is about showing up for yourself every day.

This program is designed for men weighing 105kg+ whose primary goal is to build lean muscle mass, increase strength, and improve overall physique. Follow the training, nutrition, and cardio guidelines consistently for optimal results over 6–8 weeks.

This program cuts through the noise and focuses on what actually drives muscle growth – building strength, fueling your body properly, and training with purpose and consistency. Whether you're struggling to gain size, feeling stuck with little progress, or lacking structure in your routine, this is your opportunity to take control and start seeing real results. No shortcuts, no gimmicks. Just a clear, structured path to building lean muscle, increasing strength, and developing a stronger, more confident version of yourself.

This is not just another plan that you will end up quitting - but a commitment you will keep.

Show up - even when you don't feel like it. You are building discipline - not chasing motivation.

Your transformation starts now,

N & E

How to use this program:

1. Follow the plan consistently (this is everything). Results come from consistency, not perfection. Stick to the training, nutrition, and step targets daily for at least 6–8 weeks before judging progress.
2. Hit your calorie and protein targets first. If you only get one thing right, make it this.
3. Train with effort, not just attendance. Don't just "go through the motions." Push your sets close to failure while maintaining good form. Progressively try to lift heavier or do more reps over time.
4. Use the meal plan as a flexible guide. You don't have to eat the exact same foods every day. Swap meals within the structure as long as you stay within your calorie and macro targets.
5. Don't skip steps or cardio. Fat loss isn't just about gym sessions.
6. Plan your week in advance. Decide ahead of time. This removes decision fatigue and keeps you on track.
Decide:
 - When you'll train
 - What you'll eat
 - When you'll do cardio
7. Track your progress weekly (not daily). Weigh yourself 2–3 times per week and take progress photos. Look for trends over time, not daily fluctuations.
8. Expect challenges — and stick to the program through them. You will have days where motivation drops. That's normal. Discipline, not motivation, is what gets results.
9. Recovery matters. Sleep 6 – 8 hours per night and take your rest days seriously. Fat loss and muscle retention both depend on proper recovery.
10. Adjust only if needed. If after 2–3 weeks, progress is not as desirable:
 - Slightly reduce calories OR
 - Increase daily activity (steps/cardio)
 - Don't make random changes too early.
 - Trust the process
