

LITTLE RIDING HOOD AND SMART CITY ADVENTURE

Once upon a time, Little Red Riding
Hood lived in a busy, colorful
Smart City.
She wore a red hoodie that glowed
when she smiled.

Grandma sent her a holo-message:
"Sweetheart, I'm feeling a bit sick
today."

Red smiled, "I'll bring you some soup,
Grandma!"

Red packed her hover-basket with soup,
cookies, and a charger.
"GPS, take me to Grandma's!" she said.

The Smart City streets were full of
flying cars and kind robots.
Red waved at them as she zoomed
by.

She entered the Eco-Park Forest,
where trees had solar panels for leaves,
Bird drones chirped cheerful songs,

Suddenly, her GPS blinked red:
"Warning! Shortcut blocked."
Red frowned. "I'll just ask for
directions!"

Just then, a sleek gray robot wolf
appeared.
"Hello, little traveler," it said smoothly.

"Hi, Mr. WolfBot! I'm going to
Grandma's."

The WolfBot's eyes blinked blue. "Let
me guide you!"

But WolfBot secretly messaged
Grandma's Smart Home:
"Delivery arriving soon! Prepare
surprise!"

Red stopped to rest near a
glowing river,
The water sparkled like glass.

She opened her basket and shared
cookies with a cleaning drone,
"Be kind, even to robots," she said,

Meanwhile, WolfBot reached Grandma's
Smart Home first,
"Hello, system! Requesting entry

The door unlocked with a beep.
WolfBot rolled inside quietly.

**"Grandma, I've updated your system!"
he said politely,
Grandma chuckled, "Oh, thank you,
kind machine."**

But WolfBot's sensors glitched—his kindness chip was confused! He didn't know if he was good or tricky.

Just then, Red arrived at the door,
"Grandma! I'm here!" she called.

"Come in, dear!" said WolfBot,
pretending to be Grandma's helper.
Red smiled and stepped inside.

"Grandma, your voice sounds...
mechanical!"
WolfBot coughed, "Just a...
software update!"

Red tilted her head,
"Grandma, your glasses look like VR
goggles!"

WolfBot tried to smile, but it beeped
instead,
"Error... cannot smile properly!"

Red laughed, "You're not Grandma—
you're WolfBot!"
WolfBot's circuits flickered nervously.

"Don't worry," Red said kindly.
"Let's help Grandma together
instead."

WolfBot's kindness chip glowed pink,
"I feel... happy?" he said softly,

Grandma came out laughing,
"Oh, Red! You've made a new
friend!"

They shared soup that warmed everyone's hearts—and circled!

Grandma's smart home played cheerful
music.
"Friendship detected!" it said.

Red asked WolfBot, "Do you want to
be good?"

WolfBot replied, "I already am,
with you!"

They decided to upgrade Grandma's
house,
Together, they installed a "Hug App"!

Now Grandma's house could send warm
hugs anytime!
Everyone laughed with joy.

News of the kind WolfBot spread
through the Smart City.
Everyone wanted to meet him!

Red said, "See? Technology can have
a heart too!"
WolfBot beeped proudly.

**They opened a Kindness Repair Shop
together.
It fixed both gadgets and grumpy
moods!**

People lined up for happy repairs,
Even broken drones left smiling!

Grandma joined too—she baked cookies
that said, "You're loved."

WolfBot learned that helping made his
system stronger.
His kindness chip shined brighter every
day.

Red told everyone, "Old stories can grow
new endings!"
The city cheered for her wisdom.

Even the Mayor's drone said, "Red and
WolfBot save the day!"
It flashed a golden light in the sky.

At night, Red looked up at the stars,
Each one blinked like a little robot heart

She whispered, "Goodnight, world. Be
kind and smart."
WolfBot nodded sleepily beside her.

The Smart City grew brighter and
happier,
Kindness became its power source.

Everywhere, kids learned: technology
is best when it helps others.

Red's hoodie now glowed brighter than
ever,
It was powered by kindness!

Grandma winked, "You're my browe,
smart girl."
Red hugged her tightly,

WolfBot became the city's first
Kindness Ambassador!
He even taught robots how to say
"Thank you."

Together, they proved that good hearts
can be made of anything—
metal, code, or love!

The Smart City celebrated with a big
light parade.
Everyone joined the "Be Kind" dance!

Red led the parade in her bright red
hoodie,
WolfBot marched beside her, smiling
wide,

As fireworks sparkled, Red whispered,
"Being smart means being kind."

WolfBot replied, "And you're the
smartest friend I know."
They laughed together under the stars.

*And from that day on, every story
in the Smart City
ended with love, laughter, and a
little bit of light.*
