

The Scythe Maneuver: A proven Method To Get You More Kills

Shallow Flank VS Scythe Maneuver

- Shallow Flank
 - Cap Edge
 - Low Risk, Low Reward
 - Won't catch unaware reinforcements
 - You will get spotted very quickly
- Scythe Maneuver
 - Enemy Side of Cap
 - Higher Risk, Even Higher Reward
 - Will catch reinforcements
 - It takes longer to get spotted

Methodology

People see in a cone of vision. When you play maps where the capture points are the objective, they will focus their cone of vision on the cap points. If you do a shallow flank (on your side of the capture point) you are still within their cone of vision. With a Scythe Maneuver you flank so hard that you are out of their cone of vision that you are not likely to get spotted giving you free kills reliably.

The Scythe Maneuver Checklist

- Push to the enemy side of the capture point
- Use of dead space/Cover to conceal movement
- Proper sound settings
- Constant use of the mini map to keep a mental image of front line

Map Examples

BLUE: Friendly Front Line

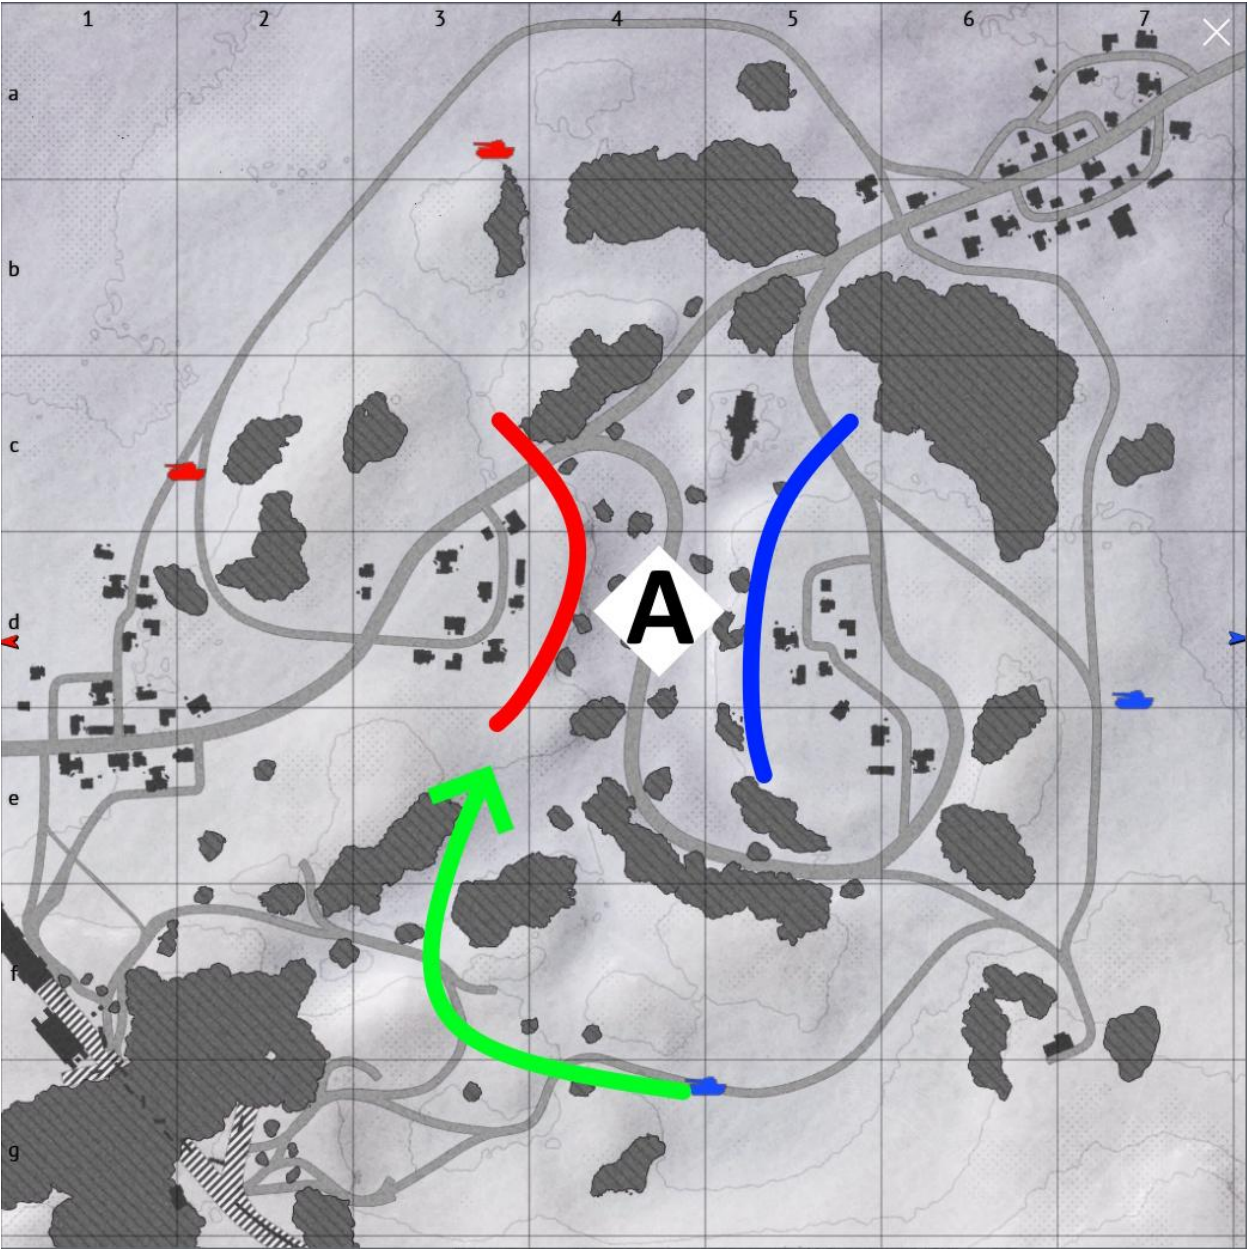

RED: ENEMY Front Line

GREEN: Scythe Maneuver

Tunisia Scythe Maneuver

Frozen Pass Scythe Maneuver

Finland Scythe Maneuver and Adaptive Scythe Maneuver
