

Market Turning Points. Quantified.

An automated global hedge fund
for a new generation of investors

An existing research business building toward systematic fund management

Marty Meydan · Founder & CEO

An operating business with paying clients

9

current paying clients

Approximately 4 have used the information for several years.

Current commercial use

Clients use Adeah's timing research and pricing indicators through Global Trader Club to inform discretionary trading decisions.

Automation is already in development.

Founder-reported figures, September 2026. Client use does not establish trading performance.

The long-term vision

Broader participation.

A simpler investor experience.

Systematic fund management.

Build toward a global participant base through a digital platform, with access determined by the eventual fund structure and each jurisdiction's requirements.

Adeah's research foundation

Market cycles

Study recurring structures and relationships across time.

Timing windows

Identify periods to assess for potential market turning points.

Price context

Examine price levels alongside daily and intraday timing hypotheses.

Research output

Produce documented observations that can be evaluated and challenged.

Evidence that can support automation

Recorded hypotheses

Preserve original timestamps, model versions and evaluation rules.

Complete observation sets

Review misses and ambiguous cases alongside selected examples.

Independent evaluation

Test repeatability and assess results on data outside development.

Implementation analysis

Evaluate costs, execution assumptions, drawdowns and model failure.

Automation in progress

Work underway

Automate the existing information workflow and codify the methodology.

02 Validation

Evaluate the model and resolve limitations before execution work.

03 Supervised pilot

Develop monitoring, risk limits and human authorization controls.

04 Fund readiness

Assess fuller automation alongside governance and operating requirements.

The proposed investor experience

A clear digital experience

Explain the strategy in plain language.

Provide transparent reporting of exposure, results and risk.

Make participation and account information easy to understand.

Access designed deliberately

Explore broader participation where a suitable structure allows it.

Define investor eligibility and launch markets before onboarding.

Set fees and liquidity terms through the fund-design process.

Company development and fund capital

Adeah company investment

Finance the research platform, engineering and operating capability.

Evaluate software or research licensing as potential commercial routes.

Global Trader Club already serves paying discretionary traders.

Future fund participation

Capital managed under a separately defined investment mandate.

Potential fund economics depend on the eventual structure and terms.

A fund subscription would be distinct from ownership in Adeah.

Founder and proposed team

Marty Meydan

Founder & CEO, Adeah LLC

Developed the market-timing methodology.

Background in insolvency accounting in Sydney, Australia.

Capabilities to build

Quantitative research and model validation

Software engineering and data operations

Risk management and fund operations

Legal and regulatory expertise

Development capital priorities

Research

Codify the methodology and establish the evaluation record.

Engineering

Build the research engine, testing environment and pilot controls.

Fund design

Assess structure, investor access and required operating partners.

Operating capacity

Fund specialist work, data and the runway to defined milestones.

A conversation about building Adeah

Seeking capital and expertise
to advance automation of an existing
paying-client research business.

The next stage: systematic delivery and a pathway toward the global fund vision.

Development status and limitations

Adeah's research serves paying clients through Global Trader Club, and automation is in development. The automated global hedge fund remains a longer-term vision.

Selected historical charts illustrate the methodology. They do not establish a complete track record, independently verified predictive accuracy or future investment results.

Investment involves risk, including loss of capital. Any future offering would require its own terms, eligibility criteria and documentation. This draft offers no fund subscription or securities terms.

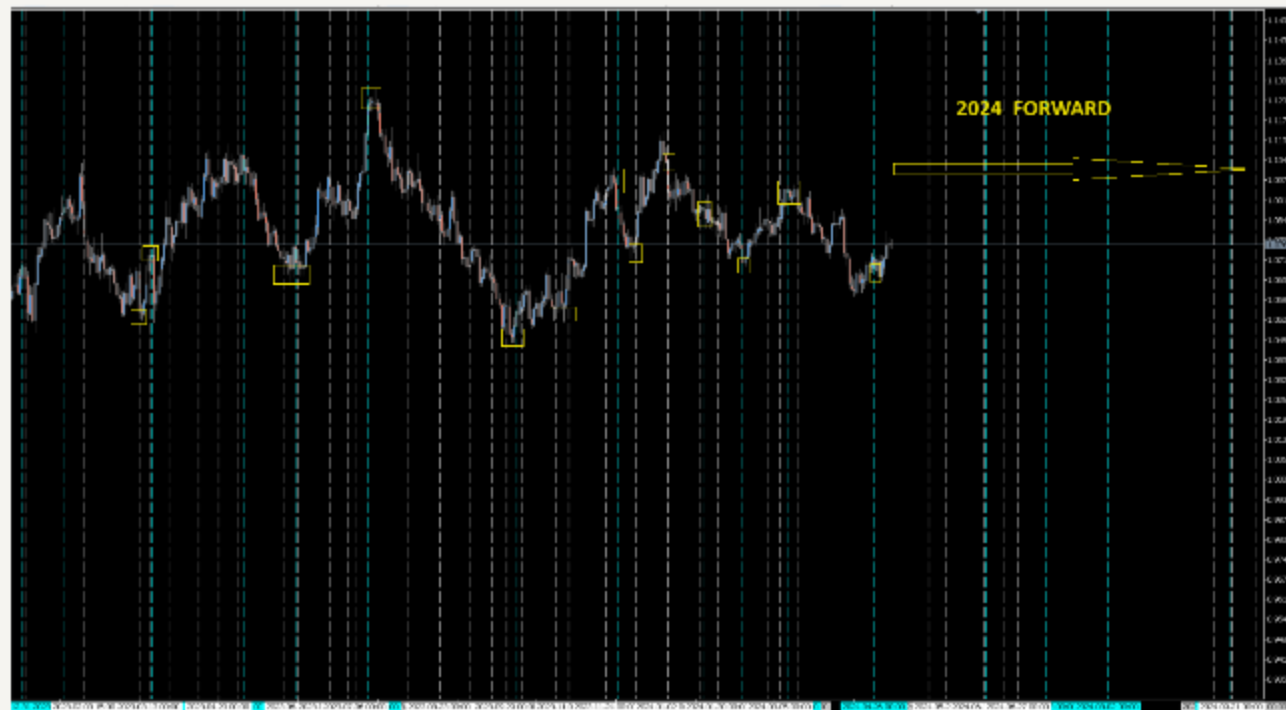

Historical illustration: gold

Timing markers and selected price turns in an original Adeah chart.

Selected example only. Original annotation timestamps and the full observation record require verification.

Historical illustration: EUR/USD

Original timing markers and the source chart's "2024 FORWARD" annotation.

Selected example only. Original annotation timestamps and the full observation record require verification.
