

A 50 year business and
governance model for
massive transformation
to a thriving civilization

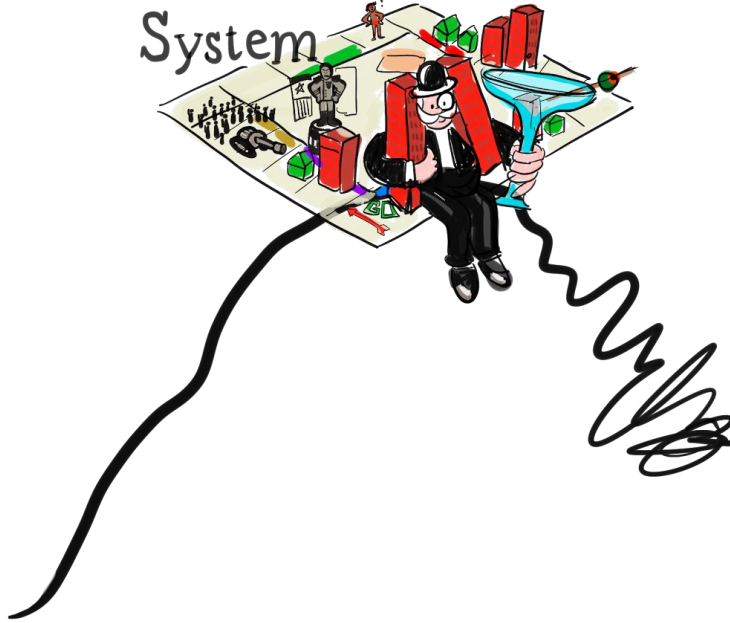

LOVE
ORGANIZED

We have the power

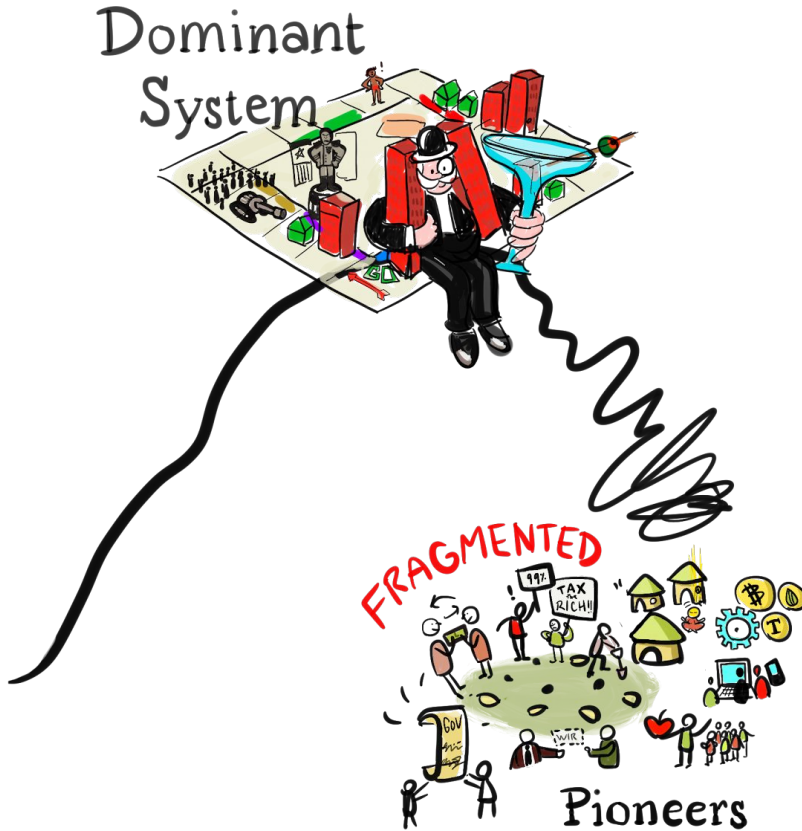

Dominant System

The dominant economic system is productive and provides modern benefits to many through growth and consumption.

Because of the vast inequality inherent in its design, its use of force and endless need for extraction, environmental and social destruction to preserve the wealth of nations, it has come to the end of its useful life.

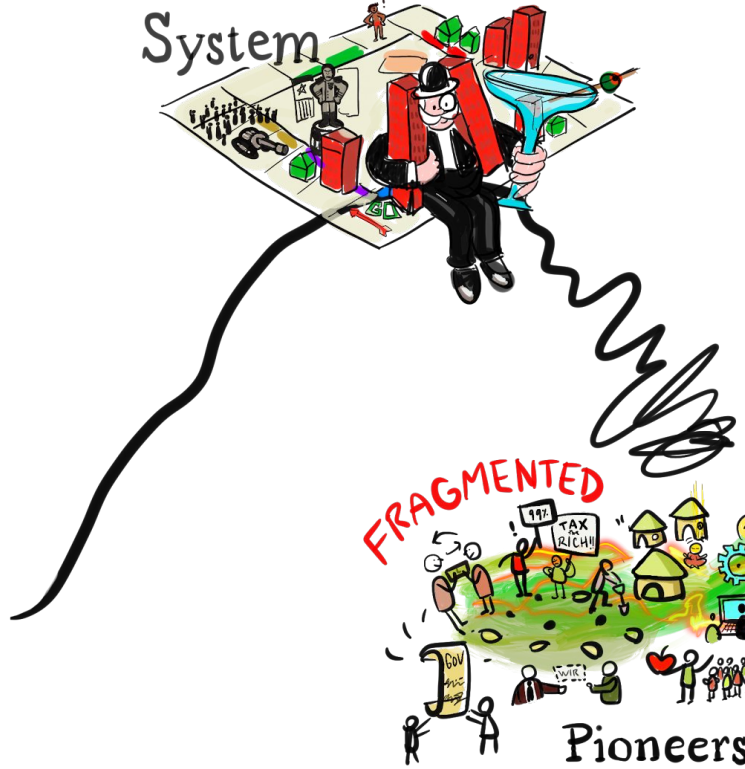

The world is ready for the next level operating system to come into practice.

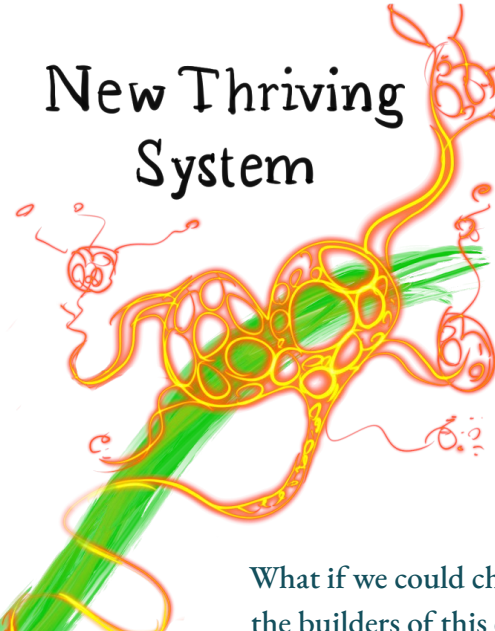

Innovators who see the need for regenerative and holistic models for governance, economy, living and learning have been building prototypes and developing solid concepts for decades.

These projects have not become mainstream because investment has not been focused there by industry, finance and governments. The business model does not compute in the dominant governance and economic worldviews. These pioneers tend to struggle on their own with few resources.

Dominant System

New Thriving System

What if we could change that and support the builders of this emerging ecosystem to connect and collaborate, becoming a whole, functioning and attractive economy, that provides better outcomes for individuals and the world.

Could we protect it to grow and become the new normal as the old destabilizes?

SOVEREIGNTY

This generation has the power, the tools and the planetary consciousness to dream, design and live this new system into being.

YES WE ARE READY!

What if we become LOVE ORGANIZED?

To make the business model, or rather the life model work, we have to use a different set of values to design the system and change the way money is produced and how the commons is governed. These values come from wisdom, care and long-term health of the whole. How else will we possibly make it?! Three major shifts are required in Governance, Culture and Money.

Governance

The core purpose of governance becomes to protect and cultivate the long term health of the whole global living system.

Culture

All people are cared for from birth to death, living lives with purpose, personal growth and community service as priority focus areas.

Money

Wealth is created by people's commitment to contribute to holistic health of the whole - through learning, teaching and stewarding ecosystems

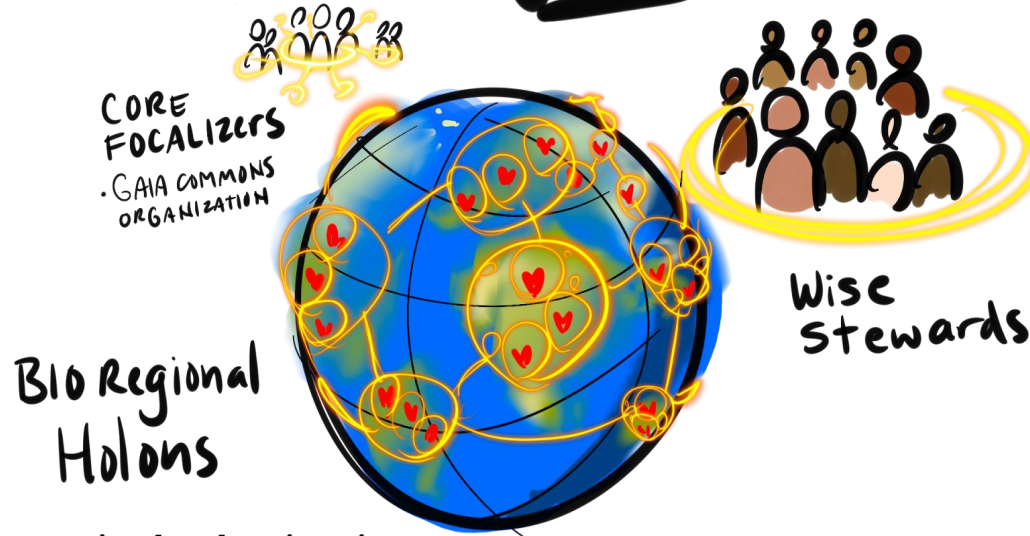

Governance

Distributed, bioregional, engaged governance.

Leadership is earned through wisdom, ethics and systemic understanding. There is a high bar to be a governing leader, and leaders are held accountable by the wisdom stewards.

- Sociocracy
- Subsidiarity
- Participatory Governance
- Digital tools to support collective intelligence decision making

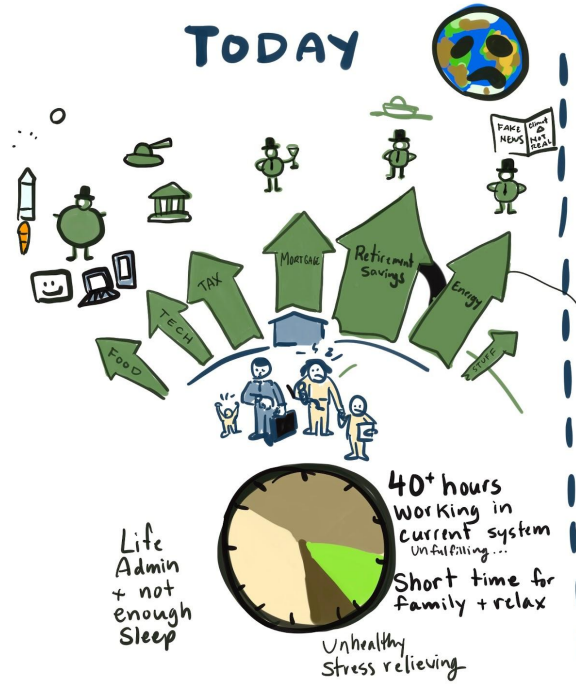

- Self-governing local regions in a unified global system
- Uplift and guide individuals in caring pods

- Ancestral Wisdom
- Integrity
- Honesty
- EARNED LEADERSHIP

Culture

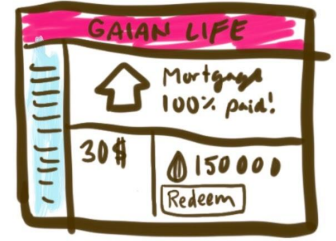

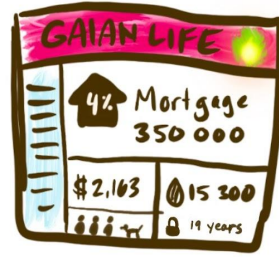

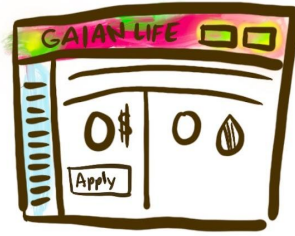

Putting inner development and community service first, makes a radical difference in the trajectory of lives. Schooling is whole child centered and everyone is coached to find their best place to serve the community. There is much less university attendance and more mentorship in jobs and learning specific skills to fulfill needed roles. People still live modern lives in the city or at the farm, and can digitally be part of this distributed community. This allows couples to gig in the regenerative economy and transition over at their own pace. Adults could have fulfilling work 30 hours per week with more time prioritized for family, self care, being outdoors and getting good sleep. The profits generated are reinvested in making more regenerative infrastructure.

When we pay the energy bill, we are supporting green energy infrastructure, when we pay the rent or mortgage the profits are going to create more eco-friendly housing rentals in the co-operative. When we have children, there is generous maternity and paternity leave. When we retire at 60, the co-operative has a spot for us in the retirement care scheme.

Money

Community currency generates internal wealth for the ecosystem. Not inflatable and tradeable like Bitcoin, can be saved for pension and retirement care. Currency is generated through commitments in key area such as teaching and learning required regenerative skills, regenerative farming and nursing and governing with ancestral wisdom.

5 joyful steps to become LOVE ORGANIZED

We know we can't really plan the way, but we can imagine a pathway, a genetic code to guide our evolution and push us to think and do together at the scale and with the professionalism required for this transformation. These five joyful steps open the possibilities if we move towards them together as a new kind of multinational social body.

1. PROTOTYPE

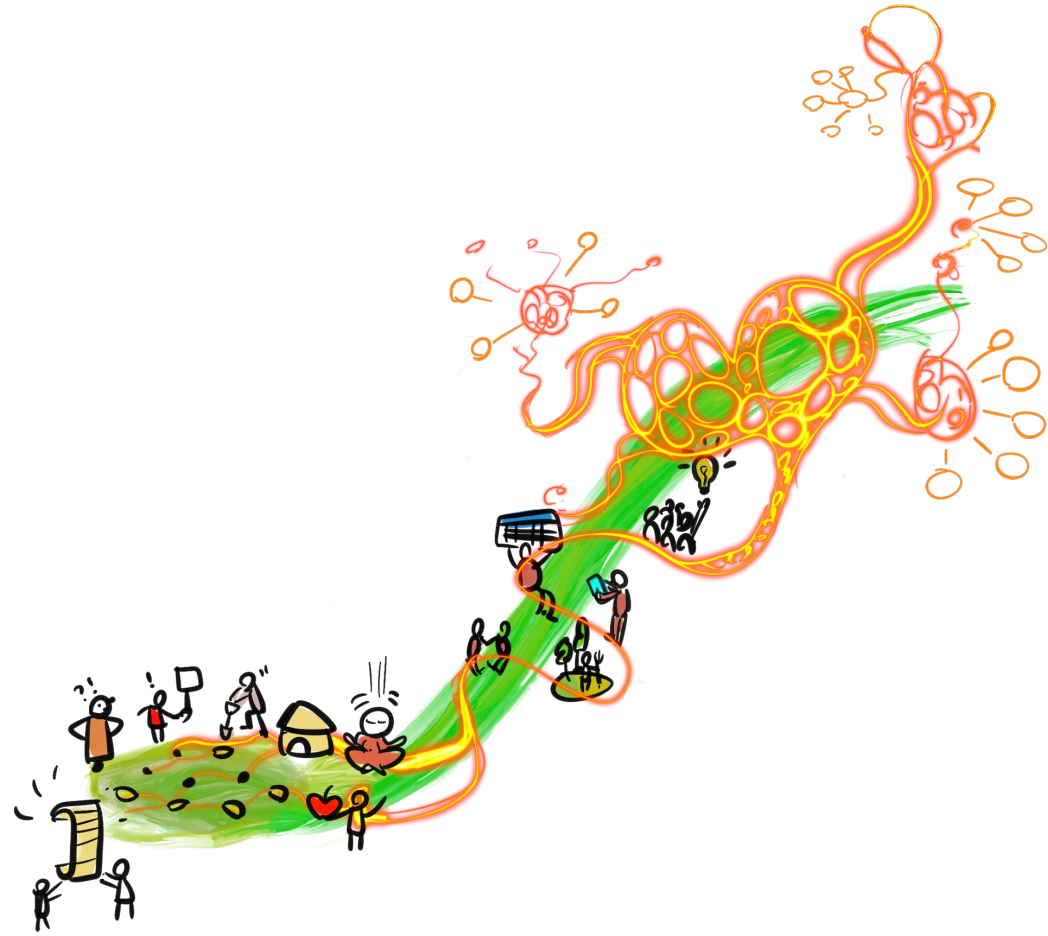

Fully Functioning
System in Cities
and EcoRegions

1. Prototype and Test in Selected Cities

With seed funding, convene the world leading regenerative systems innovators to put their various models and concepts together into a minimum viable economic infrastructure that people can choose as their new lifestyle. This includes a digital platform where people can apply for jobs and trade goods and services in a community currency backed by regeneratively stewarded land trusts. The system supports long term care, including preventative health care and retirement planning, and practicing distributed governing of resources.

With impact investment, the commons team in each city/bioregion will purchase assets such as farms, homes, condos and cash-flowing businesses to steward them regeneratively and earn consistent money for themselves and the collective. Healthy food growers, wholistic child care and education providers, complementary health practitioners, clothes upcyclers, healers and artists will all be convened from one area so they can become an ecosystem of care for each other, improving lives while making a living. A minimum community of 500 will be required before launching the currency.

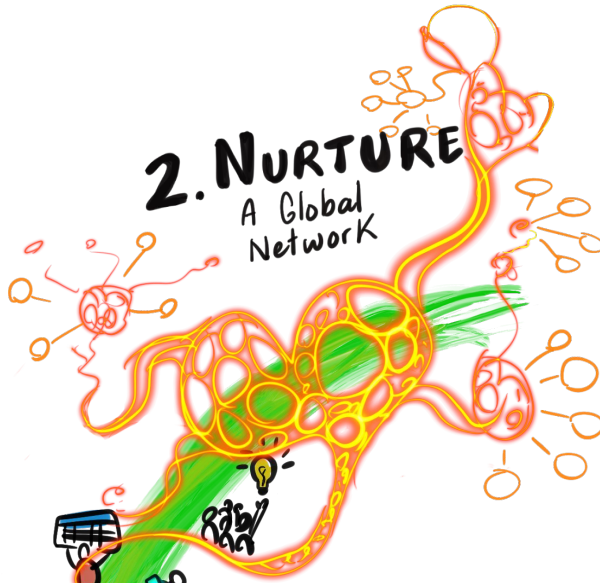

1. PROTOTYPE

Fully Functioning
System in Cities
and EcoRegions

2. NURTURE

A Global
Network

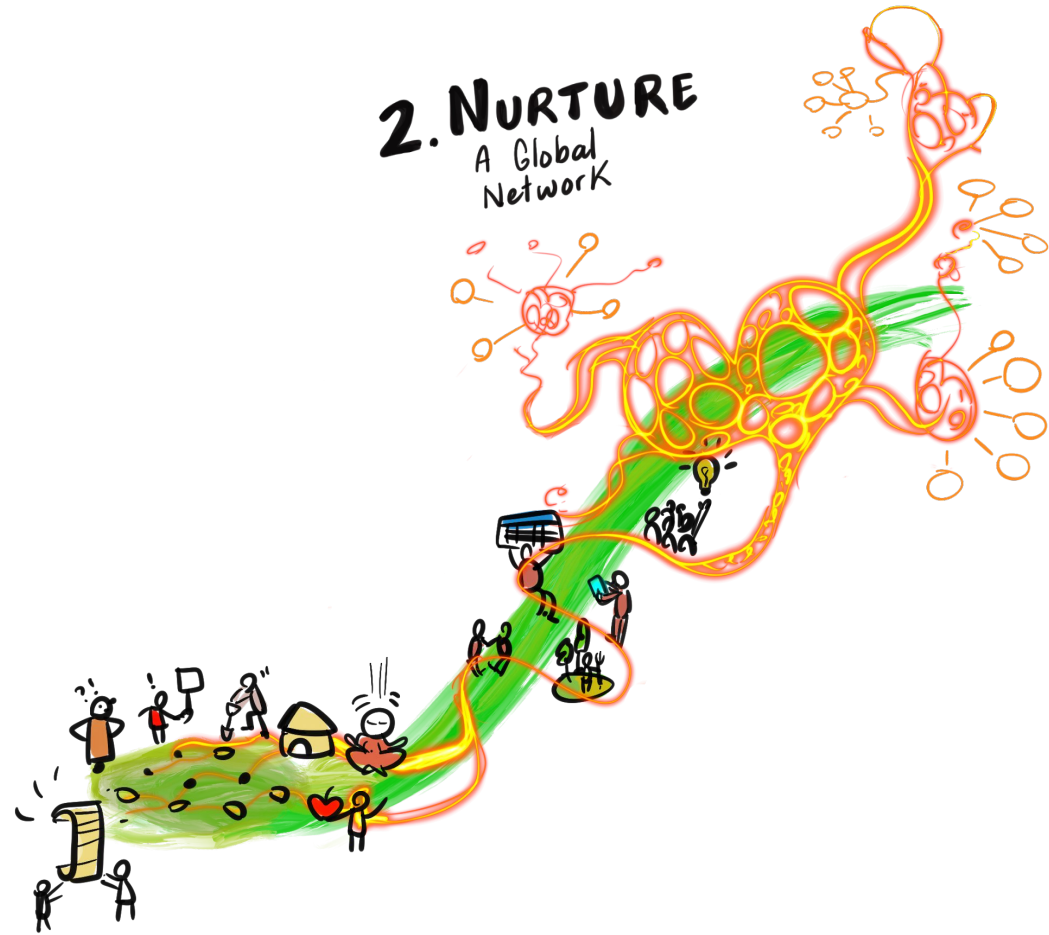

2. Nurture a Global Network

While the prototypes and test cities are developing, people all around the world are searching for their tribe, their community where they can make a difference and find others who care and are striving to live their purpose in an increasingly meaningless and unraveling civilization.

The PODS groups will be a facilitated weekly gathering of small groups connected in your bioregional holons, supporting each other to live our purposes, amplifying each other's light and learning and preparing to live into the new commons governance systems.

Members will pay a monthly fee to be part of the community and will receive multiple benefits of personal development, support, deep lasting friendships, meaning knowing their contribution is helping build the foundations for a better world, inspiration from success stories, entertainment from artists and musicians, and wholesome enjoyment. This program will be self sustaining and contribute to the governing core expenses.

1. PROTOTYPE

Fully Functioning
System in Cities
and EcoRegions

2. NURTURE

A Global
Network

3. FUND OUR MOVEMENT

3. Fund Our Movement

Philanthropy alone will not be enough to activate this transition, we have to earn and scale our efforts in the present economy to have enough momentum to get the new economy.

This social body must gather assets over time to steward regeneratively. That means we need cash flow positive companies to replace basic goods and services currently provided by extractive companies. We can start small with buying local small enterprises like local car washes and laundromats, developing a web-hosting alternative, and work our way up to housing rentals, condos and retirement homes, large farm lands, mortgage companies and large scale tech companies. The exact businesses will emerge in each location, based on the needs of the people there and the interest of the involved members.

Community Bonds with patient, modest returns will help us get started buying and managing the cash flow businesses.

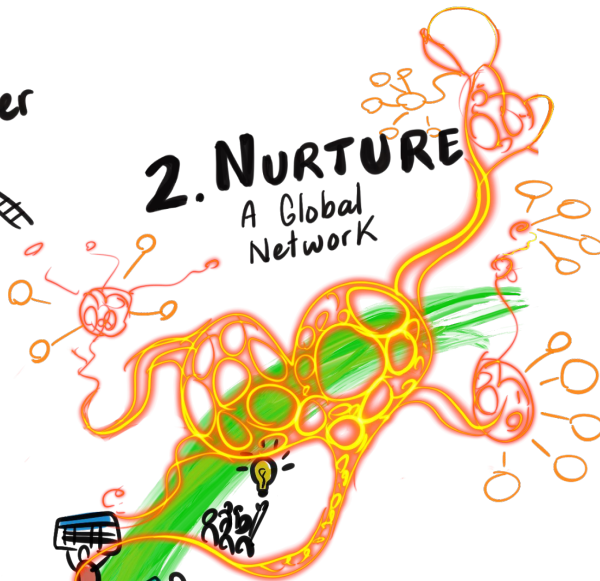

As we make profits, we will increase our ability to invest in more regenerative projects.

4. Bridge
People Over

2. NURTURE
A Global
Network

1. PROTOTYPE

Fully Functioning
System in Cities
and EcoRegions

3. FUND OUR
MOVEMENT

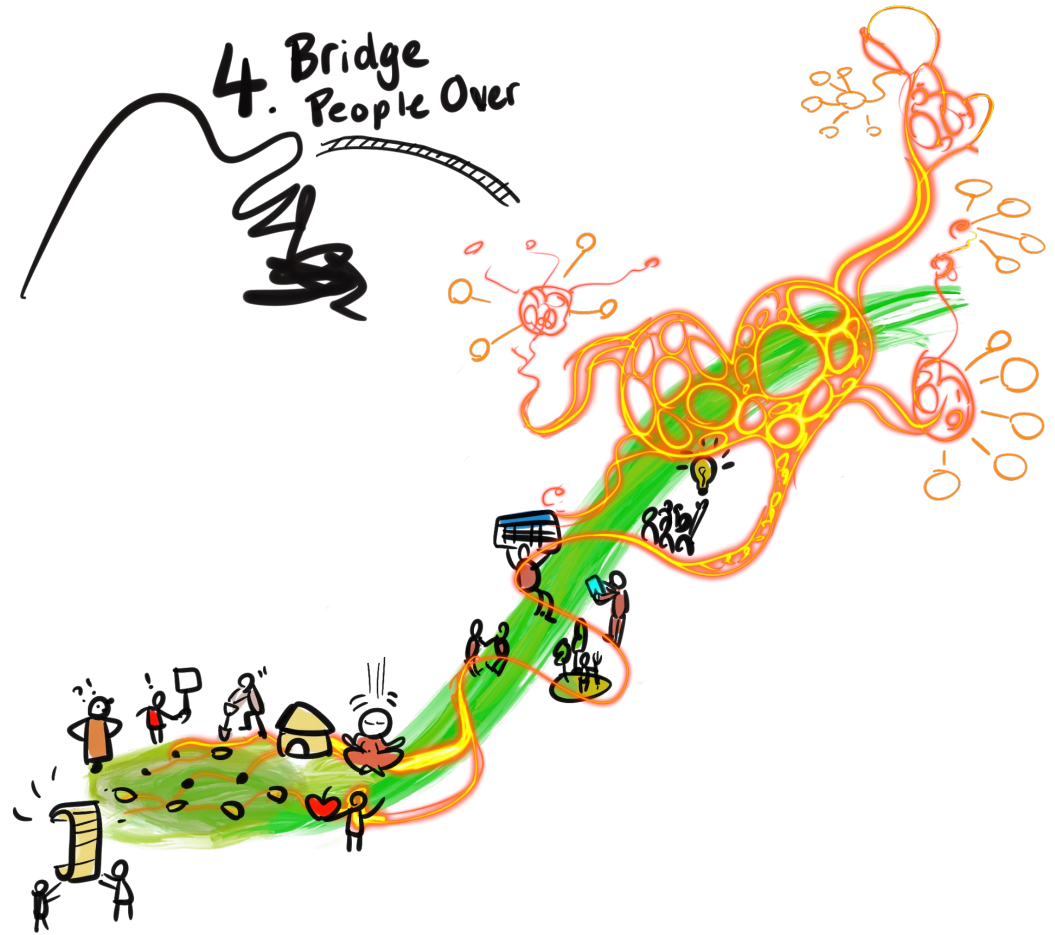

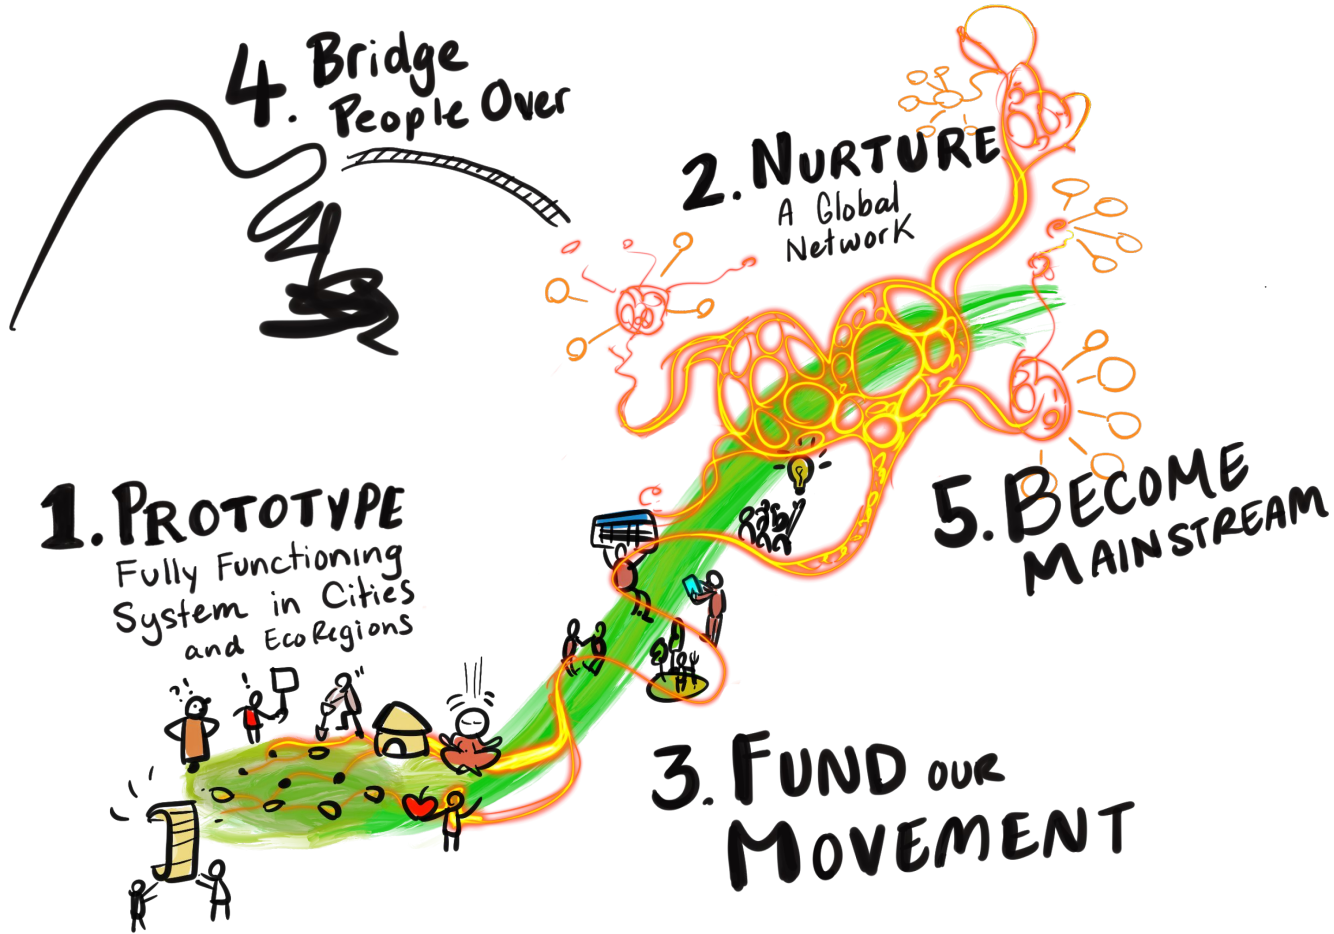

4. Bridge People Over

As the regenerative culture begins to work, more and more people will see the benefits and want to shift over to this economy. We will slowly have more jobs and housing options available and more businesses and individuals may accept the regenerative currency or buy into it as part of their CSR activities. We will help organizations and institutions adopt the principles and practices of distributed power governance and regenerative business practices. This could also generate consulting income.

The number of cities and ecoregions joining the system will grow over the years, with the aim of exponentially increasing membership.

It is speculated that a critical mass of 15-30% of people shifting to a new way of being can cause a tipping point, where the whole system shifts. If the dominant colonial systems are faltering even more than they are at the time of this writing (2026) then motivations to join the new systems may be very high.

5. Become Mainstream

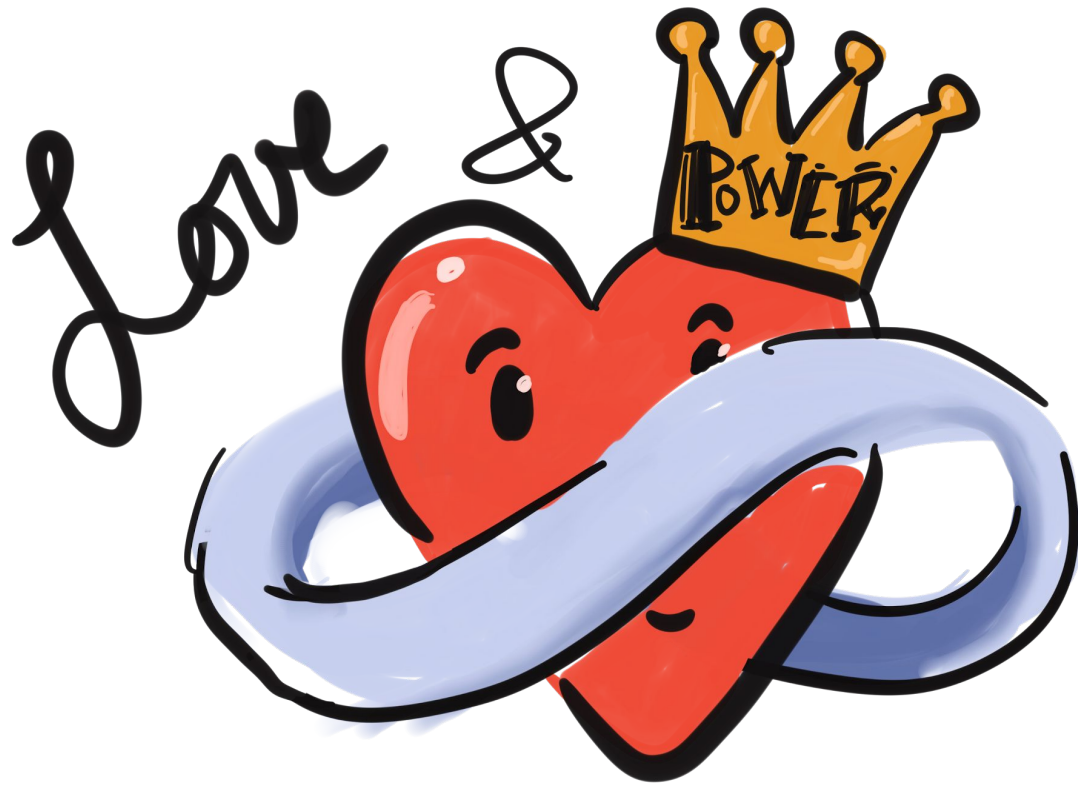

If this tipping point occurs, then we could see new leaders emerging promising the benefits that these new ways bring. Perhaps they start getting voted in and/or existing national institutions, after a catastrophe, decide to switch over to the new life-affirming governance and economy models.

There is a high chance of strong resistance from the status quo players against this system because it strives for environmental protection and fair distributions of power and resources. We will manage this along the way with technological security and resilient redundant systems and seek out allies and legal structures that can protect the communities who are successful with these methods.

The next slide summarizes a 50 year timeline that could be feasible for this transition to occur. It could be faster if the need for these systems and tools becomes painfully clear in the coming years and the proper investment is focused on it. It could be blocked by lack of investment or lack of belief in its potential and willingness to focus and try.

We need you to believe in our collective potential to mature into the best version of civilization. The time is now, we have the power, we have the tools, YES WE ARE READY, FOR WHO WE NEED TO BE.

Crime is organized, greed is organized, hate is organized... there is nothing more powerful than LOVE ORGANIZED!

*Beauty is our purpose,
joy is our compass and
LOVE is the force
that ensures we survive.*

Kara Stonehouse,

Vision Keeper of LOVE ORGANIZED
