

Bonus Guides

Business Credit Starter System

These bonus guides give customers extra support beyond the main eBook and checklists. They help answer the “little hidden steps” that most people miss when trying to build business credit the right way.

BONUS GUIDE 1

How to Avoid Common LLC Setup Mistakes

Use this guide to prevent the most common mistakes people make when starting an LLC.

Common mistakes include:

Using a home address instead of a professional virtual address

Using a personal Gmail instead of a professional business email

Skipping the domain purchase before checking state availability

Using Google Voice instead of a stronger business phone setup

Opening the wrong type of bank account

Applying for funding too early before credibility is built

Ignoring 411 listing and public business verification

Not separating personal and business finances

These mistakes can delay approvals and weaken lender confidence.

This guide helps prevent those problems before they happen.

BONUS GUIDE 2

How Business Credit Builds Faster Than Personal Credit

Personal credit often takes years to build and one mistake can cause major damage.

Business credit can often begin showing movement within 60 to 120 days when done correctly.

With strong vendor reporting, D-U-N-S setup, PAYDEX growth, and banking activity, your business can begin building its own credit profile faster.

This creates another lane for funding without everything depending on your personal credit.

That flexibility creates long-term leverage.

BONUS GUIDE 3

How to Prepare for Your First Funding Application

Before applying:

Make sure your business bank account is active

Have at least 3 to 5 reporting vendors

Maintain regular monthly transactions

Have your EIN, LLC documents, and operating agreement ready

Make sure your payment processors are active

Keep your business website and contact information professional

Verify D-U-N-S reporting is active

Choose lenders that work well with newer businesses

Preparation before applying often matters more than the application itself.

Strong structure creates stronger approvals.
