Kitchen how to

Fresh & waste water: Screw on/off system, secure again with tie down straps. The waste water container (right side) has a removable venting pipe, remember to fit back on after emptying, otherwise will cause foul odour. When emptying, place container outside on the ground to allow all water in the U trap to drain before unscrewing.

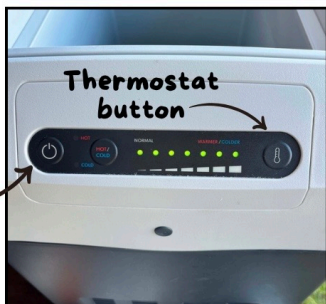

Mini table

Cooler: To turn on, press power button & LED lights will illuminate. Adjust temperature via the 'thermostat' symbol button. With 7 lights on, it can cool food up to 27°C below ambient temperature (at 3°C it will automatically switch to energy saving mode to maintain temperature). With 1 light on, it will cool to 16°C which is eco mode, helping to conserve battery power. Please note, if the secondary battery is flat the fridge will turn off & keep the bottom LOW/OFF/HIGH switch on 'HIGH'.

Tip: Fridge can also be opened from sitting inside the van & sliding arm in between the kitchen bench & back door to remove contents.

Cooker how to

**Red
tab**

Butane cooker: When cooking inside the van, always have a door or window open to ensure proper air ventilation. Burning butane creates carbon monoxide as a by product which is an odourless, colourless and tasteless gas. Mild exposure to carbon monoxide can cause symptoms such as nausea, dizziness or headaches. High exposure can cause brain damage or death! The carbon monoxide alarm should sound if levels are too high.

To use:

1. Open the cartridge & ensure the red tab lines up with the cutout in the cartridge.
2. Press the UNLOAD/LOAD lever down to engage.
3. Turn the LOW/HIGH switch past 'HIGH' to self light (lightning bolt symbol).
4. Now you will have a flame so adjust to the desired temperature.

Tip: UNLOAD/LOAD lever will not engage if the LOW/HIGH switch is not in the 'OFF' position.

Butane cartridge: The cooker fits 220g cartridges (\$10-\$20 for a 4 pack from any hardware store).

Electrical

Inverter **Secondary battery**

Secondary battery recharges while driving, powering the fridge even when engine is off & the engine battery cannot be flattened.

Inverter has a 230V wall socket & USB port to charge all electronics (inc. laptop).

Turn switch 'ON' to use wall socket only & remember to turn 'OFF' when not in use otherwise will beep when secondary battery is low.

Security info

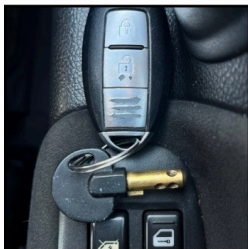

Alarm system: The alarm is armed when the doors are locked using the key fob or exterior door handle button. You will see dashboard lights flash red to confirm. The alarm is triggered if any door is opened with spare metal key or from manually opening from the inside. To disarm the system, press unlock on key fob or manually insert spare metal key into ignition barrel & turn on.

Steering wheel lock: Located under the driver's seat. Use when away from the camper for long periods of time, its presence will deter any thieves.

Locking: Can be done automatically using the lock/unlock button on the driver's door, with the key fob or the exterior door handle button.

Steering
wheel lock
key

Spare keys: This is a metal key with the steering wheel lock spare key attached also. Use by manually inserting into the ignition barrel.

Acc
ON
START

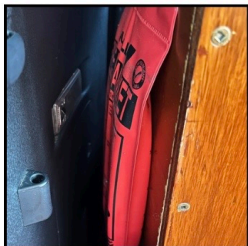

Ignition knob: To start engine, depress brake pedal firmly, push in & turn knob clockwise until in 'START' position. To turn engine off, reverse above steps & leave in 'LOCK' position. Be careful not to leave in 'Acc' or 'ON' position with dashboard lights & ignition on as it will flatten the battery.

Safety info

Fire extinguisher: Located on the rear right side of the wall (instructions on how to use it are located on the outside).

Fire blanket: Located on the rear right side attached to the kitchen bench leg (instructions on how to use it are located on the bag).

Carbon monoxide alarm: Located on the middle left side of the bed. If the alarm sounds, please read the instruction sticker & press test/reset button to silence.

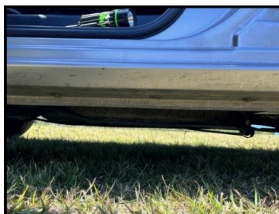

Smoke alarm: If the alarm sounds, press the middle 'TEST/HUSH' button for 3 seconds to silence. By pressing the button once it will enter 'low sensitivity detection (silent model)' for 10 minutes before returning to normal operation. Aside from smoke or steam, it can also beep from a low battery or fault. Replacement batteries are located in storage box underneath driver's seat.

Safety info

Phillips head screw

Spare tyre: If a change of tyre is required, please call Camplify roadside assistance to ensure it is professionally fitted. The spare tyre is located on the front left side underneath the van. There is a Phillips head screw located on the top side of the plastic footstep that needs to be unscrewed first. Screwdriver torch is located in storage container underneath passenger seat.

Booster cables: Located in the rear compartment. 400 Amps is suitable for small to medium vehicles [e.g. if you were to jump start another vehicle].

First aid kit: Located in the rear compartment.

Tyre changing tools: Bottle jack, axle stand & wrench are located in the rear compartment.

Toilet how to

Hand pump

1. To access, fold bed extension over and slide driver's seat forward. Before use, open the waste cassette by pulling out the lever in front. Suitable for both solid & liquid waste.

2. To flush, close the lid & push down the hand pump (on left side) with force for 5 times minimum. Push lever back in to avoid odours.

3. To empty waste, separate the top cassette from the bottom cassette by unclipping (on right side). Pull out bottom compartment, unscrew cap & empty at dump station. Rinse with fresh water 3 times minimum & leave 1-2 litres of water remaining. Remember to re-clip the fresh & waste cassettes together otherwise it will leak.

4. To reuse, pour bottle of blue chemical cleaner into waste cassette with 1-2 litres of fresh water. Please note, it is not necessary to put the cleaner in every use, only when starting off with fresh water.

5. To refill fresh water cassette, unscrew the cap on the top right, pour in the bottle of pink chemical cleaner & fill with fresh water using the kettle & green funnel. Chemical cleaners & funnel are located in front storage containers.

Helpful tips

Housekeeping:

1. **Open all curtains:** This ensures maximum visibility when checking mirrors & blind spots while driving.
2. **Secure all items:** Nothing left on table, dishes can be stacked in sink as anything on bench will slide around.
3. **Broken items:** Please let me know immediately if any items (big or small) are broken or not working as intended. This gives me enough time to find replacements as I don't expect you to replace (unless you want to for your convenience). Broken items are to be expected but communication is important. Please do not wait to let me know upon returning the camper.
4. **Check waste water:** Check regularly to ensure no overflow. "Dump stations" are well signed in most towns, the only designated location suitable to empty waste water, toilet waste & fill up fresh water.
5. **Condensation:** Sleep with windows open a crack to prevent.
6. **Tyre pressure:** 38 PSI for both front & rear tyres. For long term hires, please check tyre pressure every 2 weeks, when tyres are cold. Most petrol stations have air pumps to use for free.
7. **Road tolls:** This is covered by the service fee.
8. **Traffic offences:** Any notices will be posted to my physical address which will be forwarded onto you immediately so payment can be arranged. A name change (formal nomination) is required to nominate driver liability. In this case I will need some additional details from you, such as address & D.O.B.

Returning camper:

1. **Full tank of petrol:** Tank capacity is 60L (7.5L per 100km). See dashboard for countdown of km left until refueling is required. Camper includes a full tank upon departure.
2. **Cleanliness expectations:** Please empty waste water, rubbish bins, toilet waste cassette (if used) & ensure dishes are clean. Thorough cleaning or car wash is not expected, just clean with the supplies provided.
3. **Leftover food:** Disposing of leftover food is not necessary.
4. **Surplus kilometer charge:** Free kilometer allowance is 200km x total booking days. Any surplus km is charged at \$0.50/km & will be automatically processed via Camplify post hire.
Charge = (Total km driven - Free km allowance) x \$0.50.
Example: (1,600 km driven - 1,400 km allowance) x \$0.50 = \$100.00

Helpful tips

Apps to download:

1. 'CamperMate Australia & NZ' locates freedom camping sites all over New Zealand. This is the only app I've ever needed for finding freedom camping sites.
2. 'Gaspy' finds the cheapest fuel nearest to your location. Very helpful as you'll be surprised at how the fuel price fluctuates from town to town.
3. 'MetService' forecasts accurate, up to date and specific NZ weather conditions which is very helpful because NZ weather can be very unpredictable -known for having 'four seasons in one day.'

Self containment: Serena is certified self contained which means you're legally allowed to stay overnight at the many freedom camping sites all over NZ (free!). There is no need to show proof upon arrival of a site, as the number plate can be verified online & green warrant card (front windscreen) for visual verification. In the very rare case that an enforcement officer asks to see, a printed copy of the 'Certificate of self containment' is located in the back of this folder.

Freedom camping: Besides from paid campgrounds, it is highly recommended to stay at designated freedom camping sites only, but if you choose to stay elsewhere, do your research & follow the rules below:

1. Check for signage.
2. Don't park on private land.
3. Don't park overnight in residential or commercial areas.
4. Don't leave rubbish behind or waste.
5. Do respect the environment & locals.

Freedom camping infringements: You can receive an instant fine if you:

1. \$400 fine: Camp in a prohibited area.
2. \$600 fine: Refuse to leave an area when directed by an enforcement officer.
3. \$800 fine: Dumping waste/rubbish or vandalism.

Fines are required to be paid within 28 days.

Payment instructions will be on the notice.

Emergency info

Emergency services: If you are involved in an accident that requires emergency services call 111 for Police, Fire and Ambulance.

Camplify: If there is an accident or mechanical failure during hire please notify Camplify as soon as possible on 03 668 1211 or +64 3 668 1211 (for overseas numbers).

Roadside assistance 24/7: If the van has any mechanical or non-mechanical breakdowns, please call Camplify first on 03 668 1211 (Option 4). This is covered for free by Camplify under the 'Camplify promise'.

My contact info: If you are in need of assistance regarding any issue (minor or major), please don't hesitate to contact me through Camplify messages or my personal phone number 020 4129 4170 or +64 20 4129 4170 (for overseas numbers). Please contact me as soon as possible so I can work to resolve the issue & compensate for any repairs that are due to wear & tear.

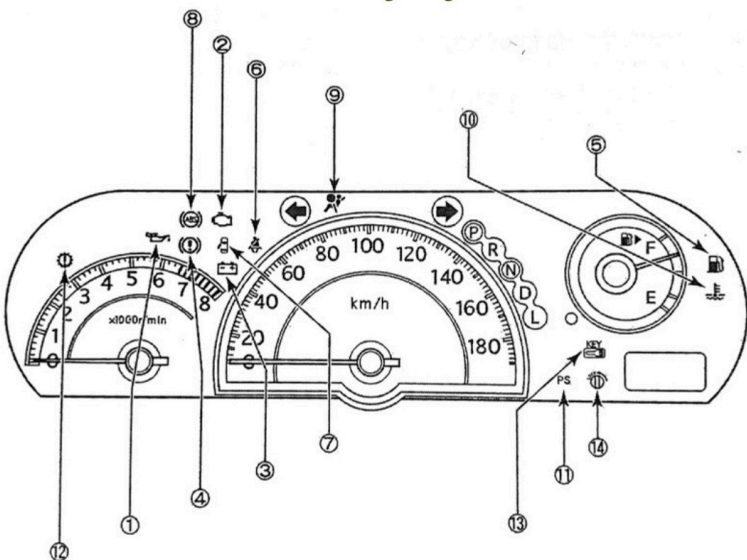

Road accident

If it's an emergency, please call 111 immediately & contact Camplify as soon as possible.

For non emergencies, follow the steps below:

1. Ensure everyone is ok.
2. Take photos of the below:
 - a. Damage to van.
 - b. Damage to third party vehicle or property.
 - c. Registration number of third party vehicle.
 - d. Scene of the accident.
 - e. Third party licences.
3. Record contact details and as much information as possible of any third parties.
4. If any witnesses are available, please record their contact details.
5. Contact Camplify as soon as possible with the below:
 - a. The van's licence number plate: NKF280.
 - b. Description of the accident.
 - c. Images listed above.
 - d. Contact details.
 - e. Any other relevant information.

Warning lights

1. Engine oil pressure warning light
2. Engine warning light (Gasoline vehicle)
3. Low battery warning light
4. Low brake fluid & parking brake warning light
5. Low fuel warning light
6. Seat belt warning light
7. Door ajar warning light
8. ABS warning light
9. Air bag warning light
10. Engine coolant temperature warning light
11. Fuel filter water level warning light ?
12. Power Assisted Steering warning light ?
13. Immobilizer activation indicator
