Why should you embrace the cryptocurrency and blockchain trading and investment ventures?

With so many online Trading and investment ventures that have flooded the market, a lot of people who dived into these ventures without the proper knowledge on how the crypto trading and investment works lost or are losing a lot of money. The cryptocurrency & Blockchain technology is still very new to most of us and only a few are investing in its education to learn how it works.

Richard Engoulou
CEO & Founder

Those with bad intentions who have invested in its education are now using their knowledge to scam the innocent ones out of their money which is quite alarming.

Why are people losing money in crypto investments?

People are losing money in crypto because they go into this industry without any prior education on how it works . People want to make ends meet or provide a better life for them and their families which this new technology cryptocurrency & Blockchain could be a hopeful path for most but it can be a challenge to sort through these investment ventures and find the right company to invest your money in .

The truth is ,Before any crypto portfolio manager engages people to join this venture, they shouldn't just focus on the bright side of the venture ,they have to make sure that people understand:

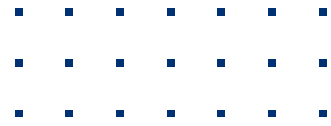

- They can make big profits from the crypto industry as well as educating them about The risk associated in dealing with the crypto market
- They also have to understand how they could protect their assets in days when the market is at its lowest season
- These portfolio managers forget to educate their customers on what causes the crypto market to rise and fall and what causes a cryptocurrency to lose its value

- It's rather unfortunate that a lot of people only get to understand about the risk involved when they have lost money in the process.If they care about your assets, they will also encourage you to learn how the industry works.

What is zukulee doing to help it's students better manage their crypto portfolios?

Our brand offers:

- Comprehensive Crypto trading and investment courses to help people become their own portfolio managers
- Our Crypto trading & investment program is curated by industry experts and is designed to meet the industry benchmark.
- We teach our students how to manage risk and protect their Assets in the crypto Market
- Our main focus is teaching our students how to identify the right coins to buy, how to read the charts and predict market prices while also giving them the tools on How to manage and Diversify their crypto Portfolios on cryptocurrency Platforms

- We drill and prepare our students with real life scenarios on how to manage their portfolios during the bear and the bull market .
- All of our courses are 100% created by industry experts who are very active in the crypto market space.this ensures course material is currently relevant and that assessments emphasize applied learning.
- Our courses are 80 % practicals and 20 % theory which means that we encourage our students to learn by doing while helping them to be more practical focused which will help them to become skilled traders and investors

- At the beginning of each module you'll be presented with the course content and assignments necessary for completion. You also have access to your Success Adviser who will help you manage your time, and support you with any administrative or technical queries you might have.

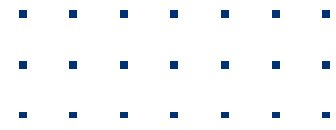

- Our virtual office is open 7 days & Every student with access to the Internet can join and get their issues resolved in real time .
- The course is fully immersive, instructor-led & hands-on demonstrations.

- Through our immediate help session, Our instructors review student academic challenges in a personalized one on one setting helping to understand and solve students problems faster. This sessions also help Shy students to participate more if they are shy to speak in a group setting
