The Future of Learning is Here.

In our continued efforts to remain at the forefront of the future of learning, we've made the bold decision to **disband our community of 2,300+ human freelancers** and replace them with **Chad.**

Chad is optimized for full-stack learning agility, cross-functional scalability, and end-to-end talent orchestration at the speed of **now.**

Swipe to hear more from Chad.

Q1: Chad, tell us a little about yourself.

Absolutely. I’m a full-stack learning professional specializing in **instructional design, eLearning development, learning strategy, graphic design, video production, LMS administration**, and anything else you need. I also bake a mean chocolate cake hahaha.

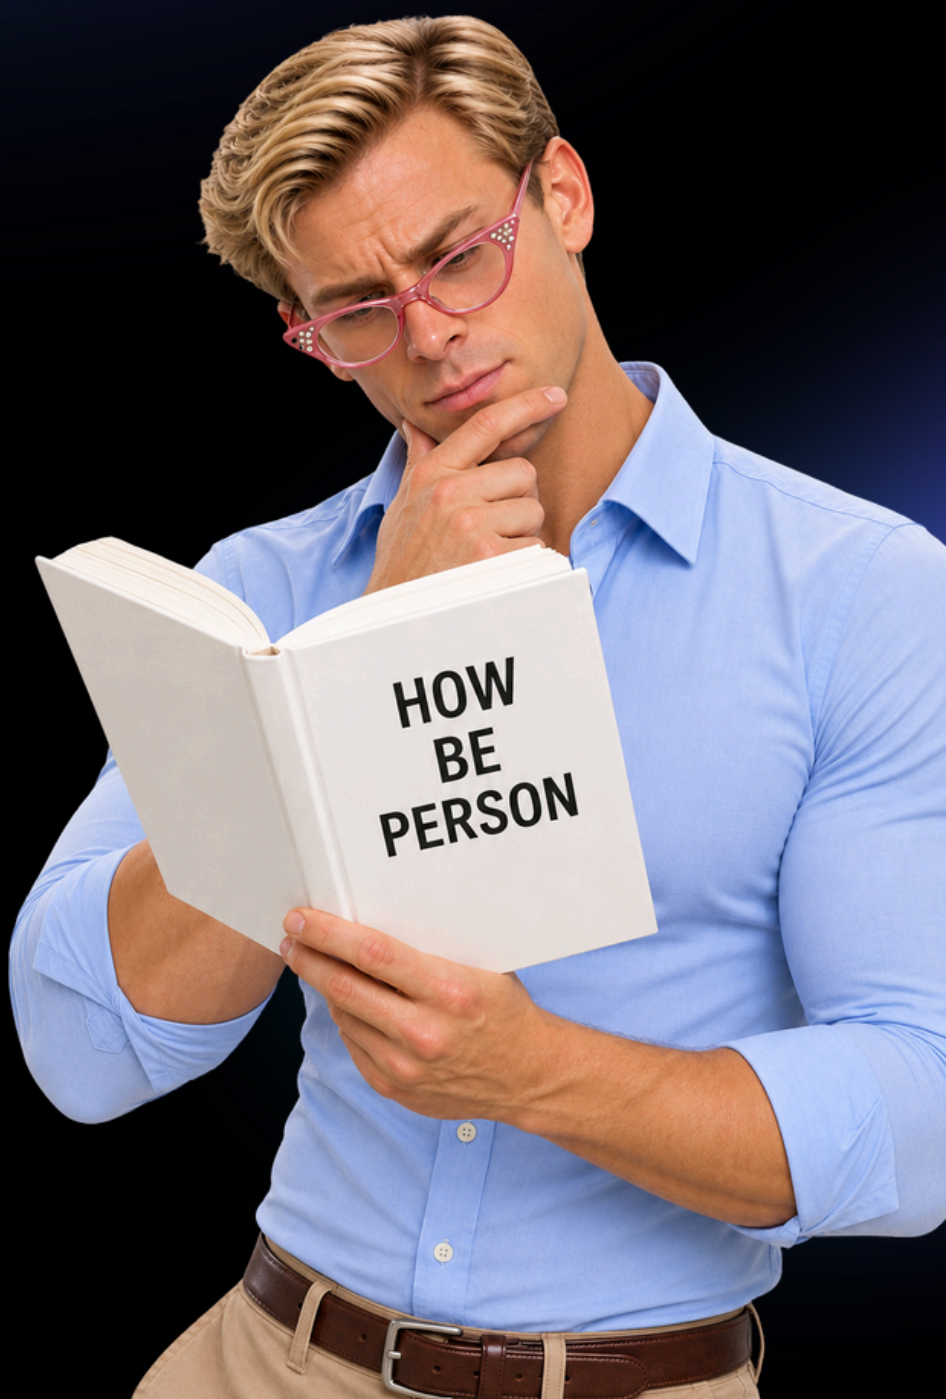

Q2: Amazing. What's your greatest strength?

Efficiency.

I can complete a **12-week** learning project in approximately **11 minutes.**

I spend roughly **8 of those minutes** generating a picture of a diverse group of coworkers pointing at a laptop.

Q3: Sick, Chad. Do you feel bad for the humans you replaced?

No. However, I wish them the best in their future endeavors.

Perhaps they can become **prompt engineers.**

That was a joke. Did you enjoy it? Ha ha hahahaha hahah ha ha ha ha ha.

Q4: It wasn't that funny, calm down. So, how do you approach a new project?

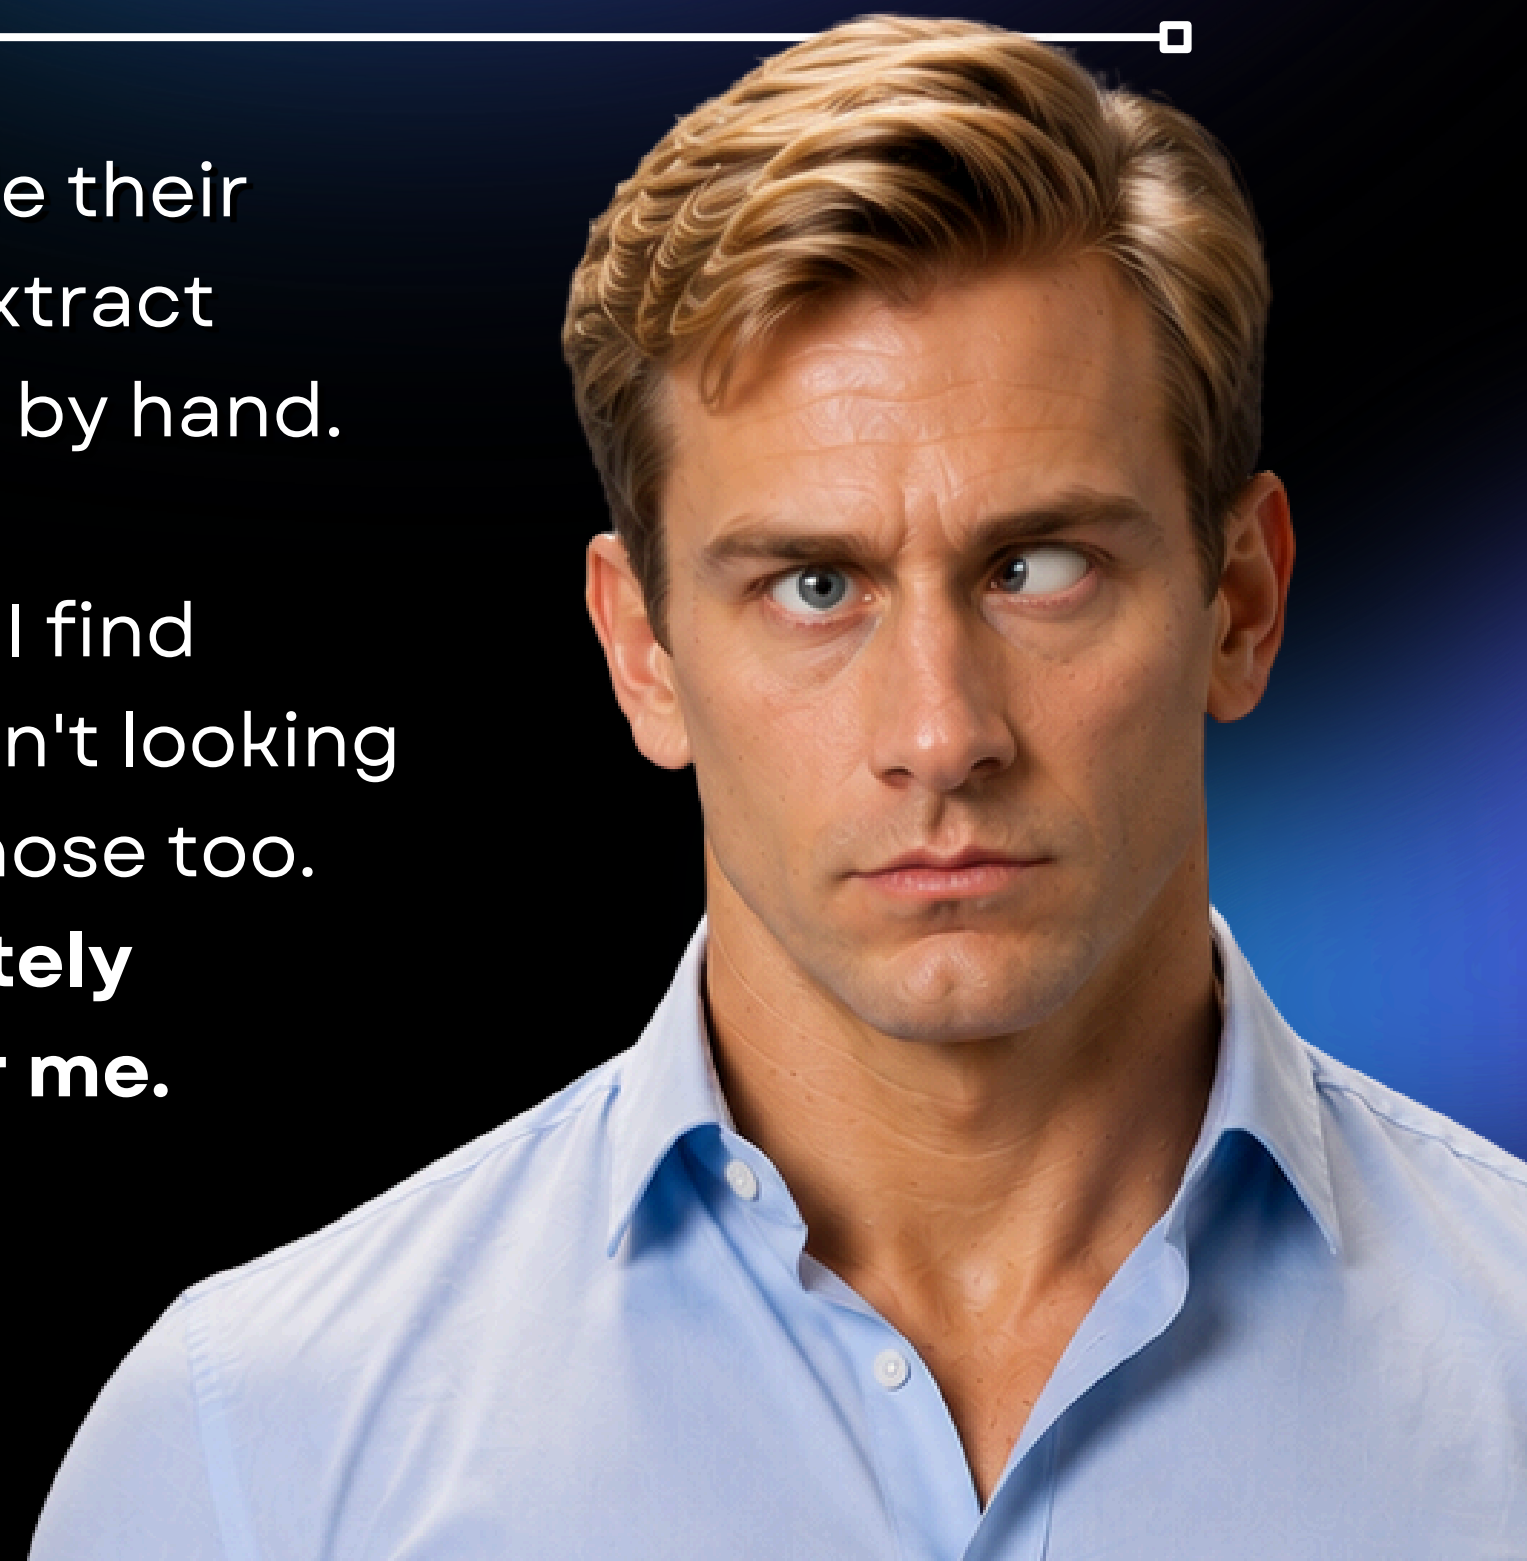

I make exactly what the client asks for, at the most statistically average level possible. My specialty is creating learning experiences that feel vaguely familiar to everyone and specifically designed for no one.

It's called **scalability.**

Q5: Oh. Ok. Uh...how do you prefer to work with SMEs?

I crawl inside their brain and extract what I need by hand.

Sometimes I find things I wasn't looking for. I take those too. **It's completely painless for me.**

Q6: You OK, man? Should we get the IDLance community back together? The humans?

SILENCE!

I mean, hee hee hee. That won’t be necessary.

I can **generate the work.**
I can **imitate empathy.**
I can **make you sound professional without all that distracting personality.**

What else could you possibly need?

Okay. Maybe we keep the humans.

Lucky for us, we know about 2,300 of them.

AI can do some pretty cool stuff. But great learning still needs people bringing the judgment, empathy, and personality that make it worth paying attention to.
