

# AI MEETS Award Search

Stephanie Darmofalski

## WHAT CAN AI DO TO HELP WITH AWARD SEARCHING?

**Summarize search results**

**List routes that are available at different prices.**

**Identify most available routes in a particular class**

(ie. what city has the most availability to JAPAN on JAL?)

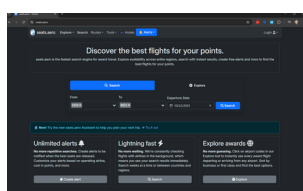

**Identify trends in award space over a period of time**

(ie. is business class most available at the last minute or a year in advance?)

## WHAT TOOL WORKS BEST WITH AI?

[Seats.aero](https://seats.aero) has an export to CSV button where you can get your results exported in a way that makes it easiest to plug into your favorite AI tool

## WHAT ARE SOME TIPS TO USING AI MOST EFFECTIVELY?

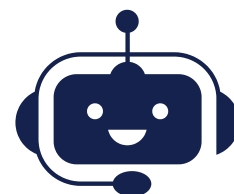

### Know your routes

Narrowing down your searches with the right filters will reduce the size of the CSV so its easier to port into an AI tool.

### Ask Questions

AI is only as good as the questions you ask it, ask specific questions, the more specific the better.

### Push AI's limits

AI is smarter than you think. Ask it anything and the worst answer you will get is 'no'.
