Manage Your Business Settings

Review the settings that affect how your business appears in emails and online. Different settings control different parts of your account.

Check your email sender details

1. Select your profile picture, then Settings.
2. Choose Emails and find the Sender section.
3. Review the sender name and sender email address used for new emails.
4. If you change either value, select Save. Existing campaign emails or automations may still need updating individually.

Check website information

1. Go to Sites, then Websites and open the website you want to review.
2. Find the website Settings area and review the website name, domain, homepage, language and logo, where available.
3. Only make changes you intend to publish. Changing a live domain can affect website access.

Keep billing details separate

1. Your profile details are not necessarily the same as your subscription billing information.
2. If you need to change invoice details, review the relevant subscription settings or contact Savvy Funnels support for help.

Before You Finish

[ ] Your email sender name and address are correct.

[ ] Your website details are accurate.

[ ] You have not changed a live domain unintentionally.
