

PETITION TO OPPOSE BILL S-206

Protect Canadians From Digital Control, Surveillance, and Administrative Punishment Without Due Process**

The Senate of Canada

The House of Commons of Canada

We, the undersigned Canadian citizens and residents, urgently call upon Parliament to reject Bill S-206 in its entirety.

Bill S-206 is presented as a routine regulatory modernization bill, but the consequences are severe, dangerous, and irreversible. This Bill would fundamentally alter the relationship between citizens and government by creating the legal machinery required for a federal digital compliance and punishment system.

WHY BILL S-206 MUST BE STOPPED

1. Creates a comprehensive federal digital profile for every Canadian aged 17+

Bill S-206 requires federal institutions to maintain personal “digital files” containing: identity records, tax and financial data, health information, family and demographic data, compliance history with federal programs

This becomes the core database for a national digital ID system.

2. Enables administrative monetary penalties WITHOUT a hearing Under S-206:

- Officials can impose fines without notifying you properly
- You can be punished without ever going before a court\
- There is no presumption of innocence

- You must pay first, then attempt to fight it later This violates the principles of due process, natural justice, and fundamental justice protected under common law and the Canadian Bill of Rights.

3. Shifts power from Parliament to federal agencies

Bill S-206 allows:

- Unelected bureaucrats
- Regulatory bodies
- Administrative enforcement units

...to make binding decisions that used to require legislation, judicial oversight, or clear legal authority.

This enables governance by regulation, not by law.

4. Allows Cabinet to set yearly “conditions” for benefits

Bill S-206 permits federal institutions to:

- Evaluate eligibility
- Determine compliance
- Withhold or condition benefits

This includes:

- CPP
- OAS
- EI

Provincial and Federal Disability payments

- Veteran benefits
- Federal grants
- Student aid

Cabinet could decide—each year—what Canadians must do to access their own money.

This creates the foundation for social-credit conditions, such as:

- medical compliance
- climate behaviour
- digital ID participation
- employment quotas
- vaccination status
- approved social behaviour

5. Enables financial control through centralized data

Because S-206 ties together:

- CRA
- Service Canada
- Immigration
- Employment and Social Development
- Health databases
- Banking integration

...your access to money can be delayed, restricted, or suspended automatically.

This is how digital ID systems are enforced in other countries.

6. Establishes the enforcement mechanism for digital ID

Digital ID itself is the infrastructure.

- Bill S-206 is the punishment arm.
- Together they create:
 - centralized identity
 - centralized financial access

- centralized compliance scoring
- automated penalties
- no court oversight
- no due process

This is the architecture of a digital control grid.

***7. Threatens privacy, autonomy, and medical freedom
By linking health records, benefits, and administrative penalties, S-206
allows:***

- monitoring of medical choices
- tracking of personal behaviour
- punishing Canadians for non-compliance
- This is incompatible with:
 - medical privacy
 - bodily autonomy
 - freedom of choice
 - informed consent under Ontario law
 - common-law rights affirmed by the Canadian Bill of Rights

***WE, THE UNDERSIGNED, DEMAND:
The immediate rejection of Bill S-206***

Full protection of Canadians' privacy, autonomy, and due process rights

A public commitment that no national digital ID or centralized compliance will ever be implemented

A return to Parliamentary supremacy, not bureaucratic rule by regulation

Full transparency in all federal data-sharing arrangements

We sign this petition to defend:

- our privacy
- our financial independence
- our medical freedom
- our right to due process
- our right to live without digital surveillance
- our right to be free from coercive federal control
- Bill S-206 is not modernization.
- It is the machinery of digital authoritarianism.

We call on Parliament to stop this bill now.
