Filtering Basics

0:02

In this video, we're gonna go over filtering basics. So we've already talked about grouping and sorting. If you did not watch that video, it is the previous video to this one, you can go back and watch that. When we filter we can get really specific with what we're looking for. For example, say I am looking for a carrier oil, number one, it's an oil, and then I can just continue adding conditions.

0:33

I need to make sure that this oil is not going to clog my pores. So just to be on the safe side I can say, it can have any of these. So if it's a zero rating, zero to one, one, or one to two to be on the safe side. Now I want to use this oil to help boost collagen. So I'm going to choose properties. And I'm actually going to choose a couple different options here. So I'm going to say I want the oil to have all these properties.

1:15

So I want it to help boost collagen. So as you can see it's whittling these down as I go along. And I also want it to be firming. Now we've got ourselves down to two results. And then I can kind of dig a little deeper into each of these. See if I have them. If I don't, you know I can adjust and I could just say, "I want it to have any of these. So it could either be collagen boosting or firming and as you go through here you can get so specific.

1:52

So if there's a certain condition, maybe you have acne prone skin. And then if you don't want a heavy oil, we can say we would like the absorption to be very fast or fast and then you have a little more options to choose from. So as you can see with your filters, you can get so so specific.

2:20

Now we're viewing the Snapshot View. You have all the same options in here as you do in the Database View. So now you'd like a butter and you don't want it to clog your pores. So we'll do butters with up to two comedogenic rating to be safe. And the absorption to be pretty quick. We don't want it to be very heavy for this specific recipe. Now we have two butters in our results.

2:54

And then you can always go back in and modify these and be like okay, well I can have an average absorption rate that's fine. I really want it to have regenerative properties. So we're still back to mafura butter and kokum butter. But I'm telling you once you get in here and start playing around, you're gonna have so much fun researching your carrier oils and butters and maybe even finding some results you hadn't even thought of. So I am excited for you to dive into this!
