Printing Views

0:00

In this video, we are going to talk about printing options. If you are going to print from the Database View, I highly, highly recommend that you turn off some of these fields because otherwise your printout is not really going to look very well. So just leave the things that are really important and then click on print view. And you're going to want to set the print view to landscape and just depending on you know what you choose, it will pull up a preview for you.

0:39

But as you can see, it's not going to include like a complete description and some things are going to be cut off just so it will fit to the page. So as you can see when you go to print even if your fields are filtered, it's really just going to print the entire database.

Now if you're looking at the Snapshot View, and you filter this down, just gonna say to just butters, when you go into print view it's still not gonna fit perfectly on your pages, but it is only printing your filtered ingredients. So the print option in here is not really that great, but if you're going to do it, I recommend doing it from the Snapshot View.
